¹ See text, this section, for definition of Class I. ² Average midmonth count. ³ Represents the aggregate length of roadway of all line-haul railroads. Excludes yard tracks, sidings, and parallel lines. (Includes estimate for Class II and III railroads). ⁴ Includes multiple main tracks, yard tracks, and sidings owned by both line-haul and switching and terminal. (Includes estimate for Class II and III railroads). ⁵ Includes cars owned by all railroads, private car companies, and shippers. ⁶ Class I railroads only. ⁷ Includes state income taxes. ⁸ Includes payroll, income, and other taxes. ⁹ Revenue and nonrevenue freight. ¹⁰ Source: Federal Railroad Admin., *Railroad Safety Statistics*, annual. ¹¹ Includes Amtrak data. Includes highway grade crossing casualties. See <<http://www.fra.dot.gov/>>; (accessed 29 April 2008).

Table 1084. U.S. Postal Service Rates for Letters and Postcards: 1991 to 2008

[In dollars. International rates exclude Canada and Mexico]

| Domestic mail date of rate change | Letters | | Postcards | Express mail—first 1/2 pound | International air mail date of rate change | Letters ¹ | Post-cards | Aero grammes |
|-----------------------------------|-------------|------------------|-----------|------------------------------|--|----------------------|------------|------------------|
| | First ounce | Each added ounce | | | | | | |
| 1991 (Feb. 3) | 0.29 | 0.23 | 0.19 | 9.95 | First 1/2 ounce | | | |
| 1995 (Jan. 1) | 0.32 | 0.23 | 0.20 | 10.75 | 1991 (Feb. 3) | 0.50 | 0.40 | 0.45 |
| 1999 (Jan. 10) | 0.33 | 0.22 | 0.20 | 11.75 | 1995 (July 9) | 0.60 | 0.40 | 0.45 |
| 2001 (Jan. 7) | 0.34 | 0.21 | 0.20 | 12.25 | 1999 (Jan. 10) | 0.60 | 0.50 | 0.50 |
| 2001 (July 1) | 0.34 | 0.23 | 0.21 | 12.45 | First ounce | | | |
| 2002 (June 30) | 0.37 | 0.23 | 0.23 | 13.65 | 2001 (Jan. 7) | 0.80 | 0.70 | 0.70 |
| 2006 (Jan. 8) | 0.39 | 0.24 | 0.24 | 14.40 | 2006 (Jan. 8) | 0.84 | 0.75 | 0.75 |
| 2007 (May 14) | 0.41 | 0.17 | 0.26 | 16.25 | 2007 (May 14) | 0.90 | 0.90 | (²) |
| 2008 (May 12) | 0.42 | 0.17 | 0.27 | 12.60 | 2008 (May 12) | 0.94 | 0.94 | (²) |

¹ The rates after the first ounce depend on the country grouping to which the mail piece's country of destination has been assigned. ² Aerogrammes were discontinued on May 14, 2007. ³ On May 12, 2008, the Postal Service initiated a zoned pricing structure for Express Mail. Prices for a mail piece weighing up to a half-pound range from \$12.60 if it destines in zones 1 and 2 to \$19.50 if it destines in zone 8.

Information and Communications

This section presents statistics on the various information and communications media: publishing, including newspapers, periodicals, books, and software; motion pictures, sound recordings, broadcasting, and telecommunications; and information services, such as libraries. Statistics on computer use and Internet access are also included. Data on the usage, finances, and operations of the U.S. Postal Service previously shown in this section are now presented in Section 23, Transportation.

Information industry—The U.S. Census Bureau's *Service Annual Survey, Information Services Sector*, provides estimates of operating revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in the information sector of the economy. Similar estimates were previously issued in the *Annual Survey of Communications Services*. Data are based on the North American Industry Classification System (NAICS), and the information sector is a newly created economic sector. It comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data. It includes establishments previously classified in the Standard Industrial Classification (SIC) in manufacturing (publishing); transportation, communications, and utilities (telecommunications and broadcasting); and services (software publishing, motion picture production, data processing, online information services, and libraries).

This new sector is comprised of industries which existed previously, were revised from previous industry definitions, or are completely new industries. Among those which existed previously are newspaper publishers, motion picture and video production, and online information services. Revised industries include book publishers, libraries, and archives. Newly created

industries include database and directory publishers, record production, music publishers, sound recording studios, cable networks, wired telecommunications carriers, paging, and satellite telecommunications.

Data from 1998 to 2003 are based on the 1997 NAICS; beginning 2004, data are based on the 2002 NAICS. Major revisions in many communications industries affect the comparability of these data. The following URL contains detailed information about NAICS <<http://www.census.gov/epcd/www/naics.html>>. See also the text in Section 15, Business Enterprise.

Beginning 2001, the Service Annual Survey estimates reflect the introduction of the provisional North American Product Classification System (NAPCS) for the information sector. Data for prior years are not comparable. See <<http://www.census.gov/eos/www/napcs/napcs.htm>>.

The 1997 Economic Census was the first economic census to cover the new information sector of the economy. The census, conducted every 5 years, for the years ending "2" and "7," provides information on the number of establishments, receipts, payroll, and paid employees for the United States and various geographic levels. The most recent reports are from the 2002 Economic Census. This census was conducted in accordance with the 2002 NAICS.

The Federal Communications Commission (FCC), established in 1934, regulates wire and radio communications. Only the largest carriers and holding companies file annual financial reports which are publicly available. The FCC has jurisdiction over interstate and foreign communication services but not over intrastate or local services. The gross operating revenues of the telephone carriers reporting publicly available data annually to the FCC, however, are estimated to cover

about 90 percent of the revenues of all U.S. telephone companies. Data are not comparable with Census Bureau *Annual Survey* because of coverage and different accounting practices for those telephone companies which report to the FCC.

Reports filed by the broadcasting industry cover all radio and television stations operating in the United States. The private radio services represent the largest and most diverse group of licensees regulated by the FCC. These services provide voice, data communications, point-to-point, and point-to-multipoint radio communications for fixed and mobile communicators. Major users of these services are small businesses, the aviation industry, the maritime trades, the land transportation industry, the manufacturing industry, state and local public safety and governmental authorities, emergency medical service providers, amateur radio operators, and personal radio operations (CB and the General Mobile Radio Service). The FCC also licenses entities as private and common carriers. Private and common carriers provide fixed and land mobile communications service on a for-profit basis. Principal sources of wire,

radio, and television data are the FCC's *Annual Report* and its annual *Statistics of Communications Common Carriers* <<http://fcc.gov/wcb/iatd/stats.html>>.

Statistics on publishing are available from the Census Bureau, as well as from various private agencies. Editor & Publisher Co., New York, NY, presents annual data on the number and circulation of daily and Sunday newspapers in its *International Year Book*. The Book Industry Study Group, New York, NY, collects data on books sold and domestic consumer expenditures. Data on academic and public libraries are collected by the U.S. National Center for Education Statistics. Data on Internet use by adults are collected by the Pew Internet and American Life Project, Washington, DC, and Mediamark Research, Inc., New York, NY.

Advertising—Data on advertising previously shown in this section are now presented in Section 27, Accommodation, Food Services, and Other Services.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table i086. **Information Industries—Establishments, Employees, and Payroll: 2004 and 2005**

[For establishments with payroll (3,472.4 represents 3,472,400). Excludes most government employees, railroad employees, and self-employed persons. For statement on methodology, see Appendix III]

| Industry | 2002 NAICS code ¹ | Establishments (number) | | Paid employees ² (1,000) | | Annual payroll (mil. dol.) | |
|---|------------------------------|-------------------------|----------------|-------------------------------------|----------------|----------------------------|----------------|

Table 1089. Media Usage and Consumer Spending: 2001 to 2011

[Estimates for time spent were derived using rating data for broadcast television and cable and satellite television, survey research for radio, mobile, out-of-home media and yellow pages, and consumer purchase data (units, admissions, access) for books, home video, internet, newspapers, consumer books, consumer magazines, recorded music, videogames, and box office. Adults 18 and older were the basis for estimates for newspapers, consumer books, consumer magazines, out-of-home media, yellow pages, and home video. Persons 12 and older were the basis for the estimates for broadcast television, cable & satellite television, radio, recorded music, box office, videogames, internet, and mobile content]

¹ Can include concurrent use of media, such as watching television and reading e-mail simultaneously. Does not include media use at work. Includes other media not shown separately. ² Online and mobile use and spending on traditional media platforms, such as downloaded music, newspaper Web sites, e-books, cable modems, online video of television programs and Internet radio were included in the traditional media segment, not in pure-play internet services or pure-play mobile content. Pure-play internet services and pure-play mobile content included telecommunications access, such as DSL, Internet-only Web sites such as Yahoo!, GameSpy, eHarmony, and mobile-only services, such as MobiTV or text messaging services from telecommunication providers. ³ Telamundo and Univision affiliates included in independent and public stations. ⁴ Pay-per-view, interactive channels, home shopping, and audio-only feeds included in premium cable and satellite services. ⁵ Playback of prerecorded VHS cassettes and DVDs only.

NA Not available. ¹ Beginning 2001, detailed financial data only filed by regional Bell-operating companies. Access lines and calls reported by 50 reporting companies. ² Gross operating revenues, gross plant, and total assets of reporting carriers estimated at more than 90 percent of total industry. New accounting rules became effective in 1990; prior years may not be directly comparable on a one-to-one basis. Includes Virgin Islands, and prior to 1995, Puerto Rico. ³ The reporting threshold for carriers is \$100 million in annual operating revenue. ⁴ Based on surveys conducted by FCC. ⁵ Series revised to include all toll revenues; toll, wireless, ILECs, carriers (ILECs) and competitive local exchange carriers (CLECs). ⁶ Beginning 1995, data are for all U.S. points, and include calls to and from Alaska, Hawaii, Puerto Rico, Guam, the U.S. Virgin Islands, and offshore U.S. points. Beginning 1995, carriers first started reporting traffic to and from Canada and Mexico. Data for Canada and Mexico in prior years are staff estimates.

Table 1112. Cellular Telecommunications Industry: 1990 to 2007

[Calendar year data, except as noted (5,283 represents 5,283,000). Based on a survey sent to all facilities-based cellular, personal communications services, and enhanced special mobile radio (ESMR) systems. The number of operational systems beginning 2000 differs from that reported for previous periods as a result of the consolidated operation of ESMR systems in a broader service area instead of by a city-to-city basis]

| Item | Unit | 1990 | 2000 | 2002 | 2003 | 2004 | 2005 | 2006 | 2007 |
|-------------------------------------|------------|--------|---------|---------|---------|---------|---------|---------|---------|
| Subscribers | 1,000 | 5,283 | 109,478 | 140,766 | 158,722 | 182,140 | 207,896 | 233,041 | 255,396 |
| Employees | Number | 21,382 | 184,449 | 192,410 | 205,629 | 226,016 | 233,067 | 253,793 | 266,782 |
| Service revenue | Mill. dol. | 4,548 | 52,466 | 76,508 | 87,624 | 102,121 | 113,538 | 125,457 | 138,869 |
| Roamer revenue ¹ | Mill. dol. | 456 | 3,883 | 3,896 | 3,766 | 4,210 | 3,786 | 3,494 | 3,742 |
| Capital investment ² | Mill. dol. | 6,282 | 89,624 | 126,922 | 145,867 | 173,794 | 199,025 | 223,449 | 244,591 |
| Average monthly bill ³ | Dollars | 80.90 | 45.27 | 48.40 | 49.91 | 50.64 | 49.98 | 50.56 | 49.79 |
| Average length of call ³ | Minutes | 2.20 | 2.56 | 2.73 | 2.87 | 3.05 | 3.00 | 3.03 | (NA) |

NA Not available. ¹ Service revenue generated by subscribers' calls outside of their system areas. ² Beginning 2000, cumulative capital investment figure reached by summing the incremental capital investment in year shown with cumulative capital investment of prior year. ³ As of December 31.

Table 1121. Adult Computer and Adult Internet Users, by Selected Characteristics: 1995 to 2008

[Percent of persons 18 years old and over. Represents persons who use a computer or the Internet at a workplace, school, home, or anywhere else, on at least an occasional basis. Based on telephone surveys of persons with land-line telephones. In 2008, 2,251 persons were interviewed. The response rate was 25 percent. For 1995, Internet users include those who ever use a home, work, or school computer and modem to connect to information services, bulletin boards, or other computers over the Internet. For 2000 and 2004, Internet users include persons who ever go online to access the Internet or World Wide Web or to send and receive e-mail. For 2008, Internet users include those who at least occasionally use the Internet or send and receive e-mail]

| Characteristic | Adult computer users | | | | Adult Internet users | | | | All adults, by type of home connection, 2008 | |
|---|----------------------|-----------|-----------|-----------|----------------------|-----------|-----------|-----------|--|-----------|
| | 1995 | 2000 | 2004 | 2008 | 1995 | 2000 | 2004 | 2008 | Broad-band | Dial-up |

Banking, Finance, and Insurance

This section presents data on the nation's finances, various types of financial institutions, money and credit, securities, insurance, and real estate. The primary sources of these data are publications of several departments of the federal government, especially the U.S. Treasury Department, and independent agencies such as the Federal Deposit Insurance Corporation, the Board of Governors of the Federal Reserve System, and the Securities and Exchange Commission. National data on insurance are available primarily from private organizations, such as the American Council of Life Insurers and the Insurance Information Institute.

Flow of funds—The flow of funds accounts of the Federal Reserve Board bring together statistics on all of the major forms of financial instruments to present an economy-wide view of asset and liability relationships. In flow form, the accounts relate borrowing and lending to one another and to the nonfinancial activities that generate income and production. Each claim outstanding is included simultaneously as an asset of the lender and as a liability of the debtor. The accounts also indicate the balance between asset totals and liability totals over the economy as a whole. Several publications of the Federal Reserve Board contain information on the flow of funds accounts: Summary data on flows and outstandings, in the *Statistical Supplement to the Federal Reserve Bulletin, Flow of Funds Accounts of the United States* (quarterly); and concepts and organization of the accounts in *Guide to the Flow of Funds Accounts* (2000). Data are also available on the Federal Reserve Board's Web site <<http://www.federalreserve.gov/>>.

Survey of Consumer Finances

(SCF)—The Federal Reserve Board, in cooperation with the Treasury Department, sponsors this survey, which is conducted every 3 years to provide detailed information on the finances of U.S. families. Among the topics covered are the

balance sheet, pension, income, and other demographic characteristics of U.S. families. The survey also gathers information on the use of financial institutions. Since 1992, data for the SCF have been collected by the National Organization for Social Science and Survey Research at the University of Chicago. Data and information on the survey are available on the Web site of the Federal Reserve Board: <<http://www.federalreserve.gov/pubs/oss/oss2/scfindex.html>>.

Banking system—Banks in this country are organized under the laws of both the states and the federal government and are regulated by several bank supervisory agencies. National banks are supervised by the Comptroller of the Currency. *Reports of Condition* have been collected from national banks since 1863. Summaries of these reports are published in the Comptroller's *Annual Report*, which also presents data on the structure of the national banking system.

The Federal Reserve System was established in 1913 to exercise central banking functions, some of which are shared with the U.S. Treasury. It includes national banks and such state banks that voluntarily join the system. Statements of state bank members are consolidated by the Federal Reserve Board with data for national banks collected by the Comptroller of the Currency into totals for all member banks of the system. Balance sheet data for member banks and other commercial banks are published quarterly in the *Statistical Supplement to the Federal Reserve Bulletin* (also available on the Web at <<http://www.federalreserve.gov/>>.

The Federal Deposit Insurance Corporation (FDIC), established in 1933, insures each depositor up to \$100,000. Major item balance sheet and income data for all insured financial institutions are published in the *FDIC Quarterly Banking Profile*. This publication is also available on the Internet at the following address: <<http://www.fdic.gov/>>. Quarterly financial information for individual institutions

is available through the FDIC and Federal Financial Institutions Examination Council Web sites at <<http://www.fdic.gov>> and <<http://www.ffiec.gov>>.

Credit unions—Federally chartered credit unions are under the supervision of the National Credit Union Administration. State-chartered credit unions are supervised by the respective state supervisory authorities. The administration publishes comprehensive program and statistical information on all federal and federally insured state credit unions in the *Annual Report of the National Credit Union Administration*.

Other credit agencies—Insurance companies, finance companies dealing primarily in installment sales financing, and personal loan companies represent important sources of funds for the credit market. Statistics on loans, investments, cash, etc., of life insurance companies are published principally by the American Council of Life Insurers in its *Life Insurers Fact Book*. Consumer credit data are published currently in the *Statistical Supplement to the Federal Reserve Bulletin*.

Government corporations and credit agencies make available credit of specified types or to specified groups of private borrowers, either by lending directly or by insuring or guaranteeing loans made by private lending institutions. Data on operations of government credit agencies, along with other government corporations, are available in reports of individual agencies; data on their debt outstanding are published in the *Statistical Supplement to the Federal Reserve Bulletin*.

Securities—The Securities and Exchange Commission (SEC) was established in 1934 to protect the interests of the public and investors against malpractices in the securities and financial markets and to provide the fullest possible disclosure of information regarding securities to the investing public.

Data on the securities industry and securities transactions are also available from a number of private sources. The Securities Industry and Financial Markets Association, New York, NY, <[\[.org/\]\(http://www.sifma.org/\)>, publishes the *Securities Industry Fact Book* and *Securities Industry Yearbook*. The Investment Company Institute, Washington, DC, <<http://www.ici.org/>>, publishes a reference book, research newsletters, and a variety of research reports that examine the industry, its shareholders, or industry issues. The annual *Mutual Fund Fact Book* is a guide to trends and statistics observed in the investment company industry. *Fundamentals* is a newsletter summarizing the findings of major Institute research projects. Institute research reports provide a detailed examination of shareholder demographics and other aspects of fund ownership.](http://www.sifma</p></div><div data-bbox=)

Among the many sources of data on stock and bond prices and sales are the New York Stock Exchange, New York, NY, <<http://www.nyse.com/>>; NASDAQ, Washington, DC, <<http://www.nasdaq.com/>>; Global Financial Data, Los Angeles, CA, <<http://www.globalfindata.com/>>; and Dow-Jones & Company, Inc., New York, NY, <<http://www.djindexes.com/>>.

Insurance—Insuring companies, which are regulated by the various states or the District of Columbia, are classified as either life or property. Both life and property insurance companies may underwrite health insurance. Insuring companies, other than those classified as life, are permitted to underwrite one or more property lines provided they are so licensed and have the necessary capital or surplus. There are a number of published sources for statistics on the various classes of insurance—life, health, fire, marine, and casualty. Organizations representing certain classes of insurers publish reports for these classes. The American Council of Life Insurers publishes statistics on life insurance purchases, ownership, benefit payments, and assets in its *Life Insurers Fact Book*.

Statistical reliability—For a discussion of statistical collection, estimation, and sampling procedures and measures of reliability applicable to data from the Census Bureau and the Federal Reserve Board's Survey of Consumer Finances, see Appendix III.

Table 1125. Gross Domestic Product in Finance, Insurance, Real Estate, Rental, and Leasing in Current and Real (2000) Dollars: 2000 to 2007

[In billions of dollars, except percent (741 represents \$741,000,000,000). Represents value added by industry. For definition of gross domestic product and explanation of chained dollars, see text, Section 13]

¹ Includes other types of financial assets, not shown separately. ² Checking, savings, and money market deposit accounts, money market mutual funds, and call accounts at brokerages. ³ Covers only those stocks that are directly held by families outside mutual funds, retirement accounts, and other managed assets. ⁴ Excludes money market mutual funds and indirectly held mutual funds and includes all other types of directly held pooled investment funds, such as traditional open-ended and closed-end mutual funds, real estate investment trusts, and hedge funds. ⁵ The tax-deferred retirement accounts consist of IRAs, Keogh accounts, and certain employer-sponsored accounts. Employer-sponsored accounts include 401(k), 403(b), and thrift saving accounts from current or past jobs; other current job plans from which loans or withdrawals can be made; and accounts from past jobs from which the family expects to receive the account balance in the future. ⁶ Includes personal annuities and trusts with an equity interest and managed investment accounts. ⁷ Percentiles of income distribution in 2004 dollars: 20th: \$18,900; 40th: \$33,900; 60th: \$53,600; 80th: \$89,300; 90th: \$129,400. Percentile: A value on a scale of zero to 100 that indicates the percent of a distribution that is equal to or below it. For example, a family with income in the 80th percentile has income equal to or better than 80 percent of all other families.

Table 1135. Household Debt-Service Payments and Financial Obligations as a Percentage of Disposable Personal Income: 1990 to 2007

[As of end of year, seasonally adjusted. Household debt service ratio is an estimate of the ratio of debt payments to disposable personal income. Debt payments consist of the estimated required payments on outstanding mortgage and consumer debt. The financial obligations ratio adds automobile lease payments, rental payments on tenant-occupied property, homeowners' insurance, and property tax payments to the debt service ratio]

- Represents zero. ¹ Net operating revenue equals net interest income plus noninterest income. ² Net income (including securities transactions and nonrecurring items) as a percentage of average total assets. ³ Net income as a percentage of average total equity capital. ⁴ Interest income less interest expense as a percentage of average earning assets (i.e. the profit margin a bank earns on its loans and investments). ⁵ Total loans and leases charged off (removed from balance sheet because of uncollectibility), less amounts recovered on loans and leases previously charged off. ⁶ Noncurrent assets: the sum of loans, leases, debt securities, and other assets that are 90 days or more past due, or in nonaccrual status. Other real estate owned: primarily foreclosed property.

Table 1141. FDIC-Insured Financial Institutions—Number of Offices and Deposits by State: 2007

[As of June 30 (6,702.2 represents \$6,702,200,000,000). Includes insured U.S. branches of foreign banks. The term "offices" includes both main offices and branches. "Banking office" is defined to include all offices and facilities that actually hold deposits, and does not include loan production offices, computer centers, and other nondeposit installations, such as automated teller machines (ATMs). Several institutions have designated home offices that do not accept deposits; these have been included to provide a more complete listing of all offices. The figures for each geographical area only include deposits of offices located within that area. Based on the Summary of Deposits survey]

| State | Number of offices | Total deposits (bil. dol.) | State | Number of offices | Total deposits (bil. dol.) | State | Number of offices | Total deposits (bil. dol.) |

Table 1142. U.S. Banking Offices of Foreign Banks—Summary: 1990 to 2007

[In billions of dollars, except as indicated (791 represents \$791,000,000,000). As of December. Data cover foreign-bank branches and agencies in the 50 states and the District of Columbia, New York investment companies (through September 1996); U.S. commercial banks of which more than 25 percent are owned by foreign banks, and International Banking Facilities. Foreign banks are those owned by institutions located outside of the United States and its affiliated insular areas. Beginning 2000, data include U.S. chartered entities that are completely or partially owned by foreign companies that are not banks themselves]

| 2005 | 5,393 | 3,302 | 27 | 47,612 | 36,895 | 377,804 | 300,860 | 249,515 | 208,728 | 321,820 | 255,804 |
| 2006 | 5,189 | 3,173 | 22 | 48,262 | 37,487 | 394,125 | 315,817 | 270,420 | 223,917 | 333,914 | 267,275 |
| 2007 | 5,036 | 3,065 | 17 | 48,474 | 38,363 | 417,578 | 335,885 | 289,169 | 237,755 | 349,100 | 283,298 |

¹ 1990 for year ending September 30; 1995 reflects 15-month period from October 1994 through December 1995; beginning 2000, reflects calendar year. A failed institution is defined as a credit union which has ceased operation because it was involuntarily liquidated or merged with assistance from the National Credit Union Share Insurance Fund.

Table 1144. Noncash Payments by Method of Payment and ATM Cash Withdrawals: 2003 and 2006

[81.4 represents 81,400,000,000. Based on two data collection efforts to estimate the annual number and value of significant types of noncash payments. Estimates of check payments and ATM withdrawals were based on findings from the Depository Institutions Payments Study (2007 DI study). Electronic payments volume estimates were based on findings from the Electronic Payments Study and supplemented by the 2007 DI study. The Depository Institutions Payments Study collected the number and value of different types of payments from deposit accounts at a representative, random sample of depository institutions. A total of 1,437 depository institutions (commercial banks, savings institutions, and credit unions) from a stratified random sample of 2,700 institutions provided data for the survey. The Electronic Payments Study estimated the number and value of electronic payments in the United States for calendar year 2006. Data were collected by surveying payment networks and card issuers. Of the 73 organizations asked to participate, 65 of the largest organizations provided data. Respondents to this study collectively accounted for an estimated 99.8 percent of the electronic transactions and 99.9 percent of the electronic payments value in the United States.]

| Method of payment | Transactions (bil.) | | Value (tril. dol.) | | Average value per transaction (dol.) | |
|------------------------------------|---------------------|-------------|--------------------|-------------|--------------------------------------|------------|
| | 2003 | 2006 | 2003 | 2006 | 2003 | 2006 |
| Noncash payments, total | 81.4 | 93.3 | 67.6 | 75.8 | 830 | 813 |
| Checks (paid) | 37.3 | 30.6 | 41.1 | 41.7 | 1,104 | 1,366 |
| Commercial checks | 36.8 | 30.2 | 40.8 | 41.5 | 1,108 | 1,373 |
| Commercial banks | 29.7 | 25.2 | 38.4 | 39.0 | 1,293 | 1,551 |
| Credit unions | 4.2 | 2.7 | 0.9 | 0.9 | 219 | 326 |

| Postal money orders | 0.2 | 0.2 | (Z) | (Z) | 146 | 164 |
| Electronic payments | 44.1 | 62.7 | 26.4 | 34.1 | 599 | 544 |
| Automated Clearing House (ACH) | 8.8 | 14.6 | 24.1 | 31.0 | 2,754 | 2,122 |
| Debit cards | 15.6 | 25.3 | 0.6 | 1.0 | 40 | 39 |
| Signature | 10.3 | 16.0 | 0.4 | 0.6 | 42 | 40 |
| PIN ² | 5.3 | 9.4 | 0.2 | 0.3 | 38 | 37 |
| Credit cards ³ | 19.0 | 21.7 | 1.7 | 2.1 | 89 | 98 |
| Electronic benefits transfer cards | 0.8 | 1.1 | (Z) | (Z) | 26 | 27 |
| Memo: | | | | | | |
| ATM cash withdrawals | 5.9 | 5.8 | 0.5 | 0.6 | 85 | 99 |
| Checks (written) ⁴ | 37.6 | 33.1 | 41.2 | 42.4 | 1,096 | 1,280 |
| Checks converted to ACH | 0.3 | 2.6 | 0.1 | 0.7 | 187 | 267 |

Z Less than \$50 billion. ¹ Signature debit card payments are made like credit card payments, but use funds from transaction deposit accounts. ² PIN debit card payments also use funds from transaction deposit accounts and typically require the entry of the same personal identification number (PIN) used to access automated teller machines (ATMs). Excludes a portion estimated to have been returned to the customer as cash. ³ Credit cards include both general purpose and private-label cards. ⁴ Includes the use of checks as source documents to initiate electronic payments.

| Phone (talk in person) | (NA) | 43 | 42 | 42 | (NA) | (NA) |

NA Not available. ¹ A debit card is a card that automatically deducts the amount of a purchase from the money in an account. ² A smart card is a type of payment card containing a computer chip which is set to hold a sum of money. As the card is used, purchases are subtracted from that sum. Prepaid cards are cards that contain a stored value, or a value that has been paid up-front, allowing you to use the card much like cash. As you use the card, the prepaid value is drawn down. Examples are phone cards and gift cards. Smart cards are different from prepaid cards in that you can add money to the card at special machines designed for smart cards or sometimes at ATMs.

Table 1146. Percent of U.S. Households That Use Selected Payment Instruments: 1995 and 2004

[In percent Based on Survey of Consumer Finances conducted by the Board of Governors of the Federal Reserve System; see Appendix III]

| Age and education of head of household | Any of these instruments | | ATM ¹ | | Debit card | | Direct deposit | | Automatic bill paying | | Software ² | |
|--|--------------------------|-------------|------------------|-------------|-------------|-------------|----------------|-------------|-----------------------|-------------|-----------------------|-------------|
| | 1995 | 2004 | 1995 | 2004 | 1995 | 2004 | 1995 | 2004 | 1995 | 2004 | 2001 | 2004 |
| All households | 77.7 | 90.4 | 62.5 | 74.4 | 17.6 | 59.3 | 46.7 | 71.2 | 21.8 | 47.4 | 18.0 | 19.3 |
| Under 30 years old | 76.3 | 87.3 | 72.3 | 93.0 | 24.4 | 74.4 | 31.0 | 54.0 | 17.7 | 36.5 | 17.0 | 20.4 |
| 30 to 60 years old | 78.7 | 90.3 | 68.6 | 82.3 | 19.7 | 67.6 | 42.8 | 68.2 | 24.4 | 50.3 | 22.0 | 21.9 |
| 61 years old and over | 76.1 | 91.9 | 44.2 | 51.6 | 9.6 | 32.5 | 63.3 | 87.0 | 18.2 | 46.5 | 9.0 | 12.8 |
| No college degree | 71.4 | 86.2 | 54.7 | 67.4 | 14.3 | 54.9 | 40.3 | 64.3 | 18.1 | 39.5 | 10.9 | 12.4 |
| College degree | 91.8 | 97.5 | 80.4 | 86.4 | 25.2 | 67.0 | 61.0 | 83.2 | 30.1 | 61.1 | 31.8 | 31.3 |

¹ The question on ATMs asked whether any member of the household had an ATM card, not whether the member used it. The other questions asked about usage of other instruments. ² The question on software asked whether the respondent or spouse/partner uses any type of computer software to help in managing their money.

Table 1154. Mortgage Originations and Delinquency and Foreclosure Rates: 1990 to 2007

[In percent, except as indicated (459 represents \$459,000,000,000). Covers one- to four-family residential nonfarm mortgage loans. Mortgage origination is the making of a new mortgage, including all steps taken by a lender to attract and qualify a borrower, process the mortgage loan, and place it on the lender's books. Based on the National Delinquency Survey which covers 46 million loans on one- to four-unit properties, representing over 80 percent of all 'first-lien' residential mortgage loans outstanding. Loans surveyed were reported by approximately 120 lenders, including mortgage bankers, commercial banks, and thrifts]

Table 1155. Delinquency Rates and Charge-Off Rates on Loans at Insured Commercial Banks: 1990 to 2007

[In percent. Annual averages of quarterly figures, not seasonally adjusted. Delinquent loans are those past due 30 days or more and still accruing interest as well as those in nonaccrual status. They are measured as a percentage of end-of-period loans. Charge-offs, which are the value of loans removed from the books and charged against loss reserves, are measured net of recoveries as a percentage of average loans and annualized]

Table 1163. U.S. Purchases and Sales of Foreign Bonds and Stocks, 1990 to 2007, and by Selected Country, 2007

[In billions of dollars (31.2 represents \$31,200,000,000). Covers transactions in all types of long-term foreign securities by foreigners as reported to the Treasury International Capital Reporting System by banks, brokers, and other entities in the United States. Data cover new issues of securities, transactions in outstanding issues, and redemptions of securities. Includes transactions executed in the United States for the account of foreigners, and transactions executed abroad for the account of reporting institutions and their domestic customers. Data by country show the country of location of the foreign buyers and sellers who deal directly with reporting institutions in the United States. The data do not necessarily indicate the country of beneficial owner or issuer. The term "foreigner" covers all institutions and individuals domiciled outside the United States, including U.S. citizens domiciled abroad, and the foreign branches, subsidiaries, and other affiliates abroad of U.S. banks and businesses; the central governments, central banks, and other official institutions of foreign countries; and international and regional organizations. "Foreigner" also includes persons in the United States to the extent that they are known by reporting institutions to be acting on behalf of foreigners. Excludes acquisitions of foreign stocks through mergers that involve stock swaps. Including stock swaps, net purchases of foreign securities was \$235 billion in 2007. Minus sign (-) indicates net sales by U.S. investors or a net inflow of capital into the United States]

| Year and country | Net purchases | | | Total transactions ¹ | | | Bonds | | Stocks | |
|--------------------------------|---------------|--------------|-------------|---------------------------------|--------------|---------------|--------------|--------------|--------------|--------------|

Table 1165. Foreign Purchases and Sales of U.S. Securities by Type of Security, 1990 to 2007, and by Selected Country, 2007

[In billions of dollars (18.7 represents \$18,700,000,000). Covers transactions in all types of long-term domestic securities by foreigners as reported to the Treasury International Capital Reporting System by banks, brokers, and other entities in the United States (except nonmarketable U.S. Treasury notes, foreign series; and nonmarketable U.S. Treasury bonds and notes, foreign currency series). See headnote, Table 1163. Excludes U.S. equities acquired through mergers and reincorporations that involve stock swaps. Also excludes principal repayment flows on foreign holdings of U.S. government agency and corporate asset-backed securities (ABS). Including stock swaps and accounting for ABS repayment flows, net purchases of U.S. securities was \$830 billion in 2007. Minus sign (-) indicates net sales by foreigners or a net outflow of capital from the United States]

| Year and country | Net purchases | | | | | Total transactions ⁴ | | | | |
|---------------------------------|----------------|--------------------------|--|------------------------------|------------------|---------------------------------|--------------------------|--|------------------------------|------------------|

¹ Standard & Poor's Indices are market-value weighted and are chosen for market size, liquidity, and industry group representation. The S&P 500 index represents 500 large publicly-traded companies. The S&P MidCap Index tracks mid-cap companies. The S&P SmallCap Index consists of 600 domestic small-cap stocks. ² The Russell 1000 and 3000 indices show respectively the 1000 and 3000 largest capitalization stocks in the United States. The Russell 2000 index shows the 2000 largest capitalization stocks in the United States after the first 1000. ³ The Dow Jones Wilshire 5000 Composite Index measures the performance of all U.S. headquartered equity securities with readily available prices. Source: Dow Jones & Company, Inc., New York, NY, *Dow Jones Indexes*, (copyright). ⁴ Source: U.S. Council of Economic Advisors, *Economic Indicators*, monthly. ⁵ Aggregate cash dividends (based on latest known annual rate) divided by aggregate market value based on Wednesday closing prices. Averages of monthly figures. ⁶ Averages of quarterly ratios which are ratio of earnings (after taxes) for 4 quarters ending with particular quarter-to-price index for last day of that quarter.

Table 1172. Households Owning Mutual Funds by Age and Income: 2000 and 2007

[In percent. Ownership includes money market, stock, bond, and hybrid mutual funds, variable annuities, and mutual funds owned through Individual Retirement Accounts (IRAs), Keoghs, and employer-sponsored retirement plans. In 2007, an estimated 50,600,000 households own mutual funds. The May 2007 survey included a sample of 3,977 randomly selected households; for details, see source. For definition of mutual fund, see headnote, Table 1174.]

| Age of household head and household income | Percent distribution, 2007 | As percent of all households | | Age of household head and household income | Percent distribution, 2007 | As percent of all households | |
|--|----------------------------|------------------------------|-----------|--|----------------------------|------------------------------|-----------|
| | | 2000 | 2007 | | | 2000 | 2007 |
| Total | 100 | 45 | 44 | Less than \$25,000 | 8 | 13 | 13 |
| Less than 35 years old | 18 | 36 | 34 | \$25,000 to \$34,999 | 6 | 33 | 25 |
| 35 to 44 years old | 22 | 55 | 48 | \$35,000 to \$49,999 | 12 | 46 | 37 |
| 45 to 54 years old | 24 | 59 | 51 | \$50,000 to \$74,999 | 24 | 66 | 57 |
| 55 to 64 years old | 20 | 50 | 53 | \$75,000 to \$99,999 | 17 | 75 | 66 |
| 65 years old and over | 16 | 26 | 34 | \$100,000 and over | 33 | 78 | 74 |

Table 1183. Automobile Insurance—Average Expenditures Per Insured Vehicle by State: 2000 to 2005

[In dollars. Average expenditure equals total premiums written divided by liability car-years. A car-year is equal to 365 days of insured coverage for a single vehicle. The average expenditures for automobile insurance in a state are affected by a number of factors, including the underlying rate structure, the coverages purchased, the deductibles and limits selected, the types of vehicles insured, and the distribution of driver characteristics. The NAIC does not rank state average expenditures and does not endorse any conclusions drawn from this data.]

Table 1184. Renters and Homeowners Insurance—Average Premiums by State: 2005

[In dollars. Average premium equals premiums divided by exposure per house-years. A house-year is equal to 365 days of insured coverage for a single dwelling and is the standard measurement for homeowners insurance. The NAIC does not rank state average expenditures and does not endorse any conclusions drawn from these data.]

Arts, Recreation, and Travel

This section presents data on the arts, entertainment, and recreation economic sector of the economy, and personal recreational activities, the arts and humanities, and domestic and foreign travel.

Arts, Entertainment, and Recreation Industry—The U.S. Census Bureau's *Service Annual Survey, Arts, Entertainment, and Recreation Sector*, provides estimates of operation revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in this sector of the economy. Data beginning 1998 are based on the North American Industry Classification System (NAICS). Most establishments were previously classified in the Standard Industrial Classification (SIC) in services, some in retail trade.

This new sector is comprised of industries which existed previously, were revised from previous industry definitions, or are completely new industries. Among those which existed previously are amusement and theme parks. Revised industries include museums. New industries include theater companies and dinner theaters. The following URL contains detailed information about NAICS and provides a comparison of the SIC and NAICS <<http://www.census.gov/epcd/www/naics.html>>. See also the text in Section 15, Business Enterprise.

The Economic Census, conducted every 5 years, for the years ending "2" and "7," provides information on the number of establishments, receipts, payroll, and paid employees for the U.S. and various geographic levels.

Recreation and leisure activities—Data on the participation in various recreation and leisure time activities are based

on several sample surveys. Data on participation in fishing, hunting, and other forms of wildlife-associated recreation are published periodically by the U.S. Department of Interior, Fish and Wildlife Service. The most recent data are from the 2006 survey. Data on participation in various sports recreation activities are published by the National Sporting Goods Association. Mediamark, Inc. also conducts periodic surveys on sports and leisure activities, as well as other topics.

Parks and recreation—The Department of the Interior has responsibility for administering the national parks. The National Park Service publishes information on visits to national park areas in its annual report, *National Park Statistical Abstract. The National Parks: Index (year)* is an annual report which contains brief descriptions, with acreages and visits for each area administered by the service, plus certain "related" areas. This information can be found at: <<http://www.nature.nps.gov/stats>>. Statistics for state parks are compiled by the National Association of State Park Directors.

Travel—Statistics on arrivals and departures to the United States are reported by the International Trade Administration (ITA), Office of Travel & Tourism Industries (OTTI). Data on domestic travel, business receipts and employment of the travel industry, and travel expenditures are published by the research department of the Travel Industry Association (TIA). Other data on household transportation characteristics are in Section 23, Transportation.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1188. Arts, Entertainment, and Recreation Services—Estimated Revenue: 2000 to 2006

[In millions of dollars (127,394 represents \$127,394,000,000), except percent. For taxable and tax-exempt employer firms. Except where indicated, estimates adjusted using the results of the 2002 Economic Census. Based on the Service Annual Survey, see Appendix III]

¹ Includes other funds not shown separately. Excludes administrative funds. ² Excludes cooperative agreements and interagency agreements. ³ Includes obligations for new grants, supplemental awards on previous years' grants, and program contracts. ⁴ Beginning with 1997 data, the grantmaking structure changed from discipline-based categories to thematic ones. ⁵ Represents federal funds obligated only upon receipt or certification by endowment of matching nonfederal gifts. ⁶ Program designed to stimulate new sources and higher levels of giving to institutions for the purpose of guaranteeing long-term stability and financial independence. Program usually requires a match of at least 3 private dollars to each federal dollar. Funds for challenge grants are not allocated by program area because they are awarded on a grant-by-grant basis.

Table 1197. Total State Arts Agency Legislative Appropriations: 2007 to 2008

(For fiscal year ending September 30. In thousands of dollars (350,122 represents \$350,122,000). The National Assembly of State Arts Agencies (NASAA) is the membership organization of the nations' state and jurisdictional arts agencies. Legislative appropriations include funds designated to the state arts agency by state legislatures. These include line items, which are not controlled by the agency but passed through to designated entities. State arts agencies also receive monies from other sources including other state funds, the federal government (primarily the National Endowment for the Arts), private funds, and legislative earmarks. Minus sign (-) indicates decrease in spending)

| State | Legislative appropriation including line items | | Per-cent change 2007 to 2008 | State | Legislative appropriation including line items | | Per-cent change 2007 to 2008 | State | Legislative appropriation including line items | | Per-cent change 2007 to 2008 |

| Other | 26,929 | 24,695 | 24,980 | 25,792 | 25,740 | 25,747 | 25,507 | 25,521 |
| Acquisition, net | 21 | 27 | 186 | 138 | 12 | 17 | 15 | 22 |

¹ Financial data are those associated with the National Park System. Certain other functions of the National Park Service (principally the activities absorbed from the former Heritage Conservation and Recreation Service in 1981) are excluded.

² Includes funds carried over from prior years. ³ For calendar year. Includes other areas not shown separately. ⁴ For 1990, combined data for North Cascades National Park and two adjacent National Recreation Areas are included in National Parks total.

⁵ Includes military areas. ⁶ Federal land only, as of Dec. 31. Federal land acreages, in addition to National Park Service administered lands, also include lands within national park system area boundaries but under the administration of other agencies. Year-to-year changes in the federal lands figures includes changes in the acreages of these other lands and hence often differ from "net acquisition." ⁷ The decrease in the 2006 land total reflects acreage by the Bureau of Land Management and not by the National Park Service.

Table 1220. North America Cruise Industry in the United States: 2002 to 2006

[The North American passenger cruise industry is defined as those cruise lines that primarily market their cruises in North America. These cruise lines offer cruises with destinations throughout the globe. While most of these cruises originate in ports throughout North America, cruises also originate at ports in other continents]

| Item | Unit | 2002 | 2003 | 2004 | 2005 | 2006 |
|--|-----------|---------|---------|---------|---------|---------|
| Capacity Measures: | | | | | | |
| Number of ships | Number | 123 | 134 | 144 | 145 | 151 |
| Lower berths | Number | 197,553 | 212,004 | 225,714 | 230,891 | 249,691 |
| Passenger embarkations: ² | | | | | | |
| Global | 1,000 | 9,220 | 9,830 | 10,850 | 11,500 | 12,000 |
| United States | 1,000 | 6,500 | 7,113 | 8,100 | 8,612 | 9,001 |
| Florida | 1,000 | 4,413 | 4,676 | 4,724 | 4,843 | 5,018 |
| California | 1,000 | 600 | 807 | 1,095 | 1,301 | 1,241 |
| New York | 1,000 | 326 | 438 | 547 | 370 | 536 |
| Other U.S. ports | 1,000 | 1,056 | 1,192 | 1,734 | 2,098 | 2,206 |
| Canada | 1,000 | 527 | 482 | 454 | 455 | 423 |
| San Juan | 1,000 | 298 | 325 | 450 | 581 | 555 |
| Rest of world | 1,000 | 1,895 | 1,910 | 1,846 | 1,852 | 2,021 |
| United States expenditures of the North American cruise industry: | | | | | | |
| U.S. purchases of the cruise line goods and services | Bil. dol. | 11.95 | 12.92 | 14.70 | 16.18 | 17.64 |
| Passenger and crew expenditures | Bil. dol. | 8.84 | 9.49 | 10.70 | 11.76 | 12.89 |
| Wages & taxes paid by cruise lines | Bil. dol. | 2.06 | 2.36 | 2.88 | 3.23 | 3.48 |
| | Bil. dol. | 1.05 | 1.07 | 1.12 | 1.19 | 1.27 |

¹ Single beds. ² Port of departure. ³ Consist of the expenditures made by the cruise lines and their crew and passengers during the course of providing or taking cruises. These included cruise expenditures for headquarters operations, food and beverages provided aboard cruise ships and businesses services such as, advertising and marketing. Additionally, cruise passengers and crew purchase a variety of goods and services including clothing, shore excursions, and lodging as part of their cruise vacation or as part of a pre- or post-cruise stay.

Table 1227. Tourism Sales by Commodity Group and Tourism Employment by Industry Group: 2001 to 2007

[Sales in billions of dollars (524 represents \$524,000,000,000). Employment in thousands (5,756 represents 5,756,000). Direct tourism-related sales comprise all output consumed directly by visitors (e.g., traveler accommodations, passenger air transportation, souvenirs). Direct tourism-related employment comprises all jobs where the workers are engaged in the production of direct tourism-related output (e.g., hotel staff, airline pilots, and souvenir sellers)]

| Tourism commodity group | Direct tourism sales (bil. dol.) | | | | Tourism industry group | Direct tourism employment | | | |
|--|----------------------------------|------------|------------|------------|---|---------------------------|--------------|--------------|--------------|
| | 2001 | 2005 | 2006 | 2007 | | 2001 | 2005 | 2006 | 2007 |
| All commodities¹ | 524 | 658 | 707 | 747 | All industries | 5,756 | 5,739 | 5,772 | 5,869 |
| Traveler accommodations | 91 | 113 | 120 | 128 | Traveler accommodations | 1,377 | 1,353 | 1,356 | 1,376 |
| Transportation | 205 | 253 | 278 | 294 | Transportation | 1,327 | 1,108 | 1,110 | 1,125 |
| Passenger air transportation | 85 | 97 | 105 | 110 | Air transportation services | 592 | 450 | 446 | 454 |
| All other transportation-related commodities | 120 | 157 | 173 | 183 | All other transportation-related industries | 735 | 658 | 664 | 671 |
| Food services and drinking places | 84 | 110 | 117 | 123 | Food and beverage services | 1,608 | 1,847 | 1,869 | 1,909 |
| Recreation, entertainment, and shopping | 143 | 181 | 192 | 202 | Recreation, entertainment, and shopping | 1,190 | 1,179 | 1,174 | 1,192 |
| Recreation and entertainment | 60 | 79 | 82 | 86 | Recreation and entertainment | 596 | 624 | 618 | 633 |
| Shopping | 83 | 103 | 110 | 116 | Shopping | 594 | 555 | 556 | 559 |
| | | | | | All other industries | 254 | 251 | 263 | 266 |

¹ Commodities that are typically purchased by visitors from the producer: such as airline passenger fares, meals, or hotel services.

Accommodation, Food Services, and Other Services

This section presents statistics relating to services other than those covered in the previous few sections (22 to 26) on wholesale and retail trade, transportation, communications, financial services, and recreation services. Data shown for services are classified by kind of business and cover sales or receipts, establishments, employees, payrolls, and other items. The principal sources of these data are from the Census Bureau and include the *2002 Economic Census*, annual surveys, and the *County Business Patterns* program. These data are supplemented by data from several sources such as the National Restaurant Association on food and drink sales (Table 1243), the American Hotel & Lodging Association on lodging (Table 1242), and Universal McCann on advertising (Table 1239).

Data on these services also appear in several other sections. For instance, labor force employment and earnings data appear in Section 12, Labor Force, Employment, and Earnings; gross domestic product of the industry (Table 648) appears in Section 13, Income, Expenditures, Poverty, and Wealth; and financial data (several tables) from the quarterly *Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

Censuses—Limited coverage of the service industries started in 1933. Beginning with the 1967 census, legislation provides for a census of each area to be conducted every 5 years (for years ending in “2” and “7”). For more information on the most current census, see the Economic Census, *Guide to Economic Census*, found at <<http://www.census.gov/econ/census02/guide/index.html>>. The industries covered in the censuses and surveys

of business are defined in the *North American Industry Classification System* (NAICS). For information on NAICS, see the Census Web site at <<http://www.census.gov/epcd/www/naics.html>>.

In general, the 2002 Economic Census has two final series of publications for these sectors: 1) subject series with reports such as product lines, and establishment and firm sizes and 2) geographic reports with individual reports for each state. For information on these series, see the Census Bureau Web site at <<http://www.census.gov/econ/census02>>.

Current surveys—The Service Annual Survey provides annual estimates of nationwide receipts for selected personal, business, leasing and repair, amusement and entertainment, social and health, and other professional service industries in the United States. For selected social, health, and other professional service industries, separate estimates are developed for receipts of taxable firms and revenue and expenses for firms and organizations exempt from federal income taxes. Several service sectors from this survey are covered in other sections of this publication. The estimates for tax exempt firms in these industries are derived from a sample of employer firms only. Estimates obtained from annual and monthly surveys are based on sample data and are not expected to agree exactly with results that would be obtained from a complete census of all establishments. Data include estimates for sampling units not reporting.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1233. Selected Service-Related Industries—Establishments, Sales, Payroll, and Employees by Kind of Business: 2002

[886,801 represents \$886,801,000,000. Covers only establishments with payroll. For statement on methodology, see Appendix III]

| Kind of business | 2002 NAICS code ¹ | Estab-lishments (number) | Sales or receipts (mil. dol.) | Annual payroll (mil. dol.) | Paid employ-ees ² (1,000) |

Foreign Commerce and Aid

This section presents data on the flow of goods, services, and capital between the United States and other countries; changes in official reserve assets of the United States; international investments; and foreign assistance programs.

The Bureau of Economic Analysis publishes current figures on U.S. international transactions and the U.S. international investment position in its monthly *Survey of Current Business*. Statistics for the foreign aid programs are presented by the Agency for International Development (AID) in its annual *U.S. Overseas Loans and Grants and Assistance from International Organizations*.

The principal source of merchandise import and export data is the U.S. Census Bureau. Current data are presented monthly in *U.S. International Trade in Goods and Services* report Series FT 900. The *Guide to Foreign Trade Statistics*, found on the Census Bureau Web site at <<http://www.census.gov/foreign-trade/guide/index.html>>, lists the Bureau's monthly and annual products and services in this field. In addition, the International Trade Administration and the Bureau of Economic Analysis present summary as well as selected commodity and country data for U.S. foreign trade on their Web sites: <<http://ita.doc.gov/td/industry/otea/>> and <<http://www.bea.gov/international/index>>, respectively. The merchandise trade data published by the Bureau of Economic Analysis in the *Survey of Current Business* and on the Web include balance of payments adjustments to the Census Bureau data. The U.S. Treasury Department's *Monthly Treasury Statement of Receipts and Outlays of the United States Government* contains information on import duties. The International Trade Commission, U.S. Department of Agriculture (agricultural products), U.S. Department of Energy (mineral fuels, like petroleum and coal), and the U.S. Geological Survey (minerals) release various reports and specialized products on U.S. trade.

International accounts—The international transactions tables (Tables 1246 to 1248) show, for given time periods, the transfer of goods, services, grants, and financial assets and liabilities between the United States and the rest of the world. The international investment position table (Table 1249) presents, for specific dates, the value of U.S. investments abroad and of foreign investments in the United States. The movement of foreign and U.S. capital as presented in the balance of payments is not the only factor affecting the total value of foreign investments. Among the other factors are changes in the valuation of assets or liabilities, including changes in prices of securities, defaults, expropriations, and write-offs.

Direct investment abroad means the ownership or control, directly or indirectly, by one person of 10 percent or more of the voting securities of an incorporated business enterprise or an equivalent interest in an unincorporated business enterprise. Direct investment position is the value of U.S. parents' claims on the equity of and receivables due from foreign affiliates, less foreign affiliates' receivables due from their U.S. parents. Income consists of parents' shares in the earnings of their affiliates plus net interest received by parents on intercompany accounts, less withholding taxes on dividends and interest.

Foreign aid—Foreign assistance is divided into three major categories—grants (military supplies and services and other grants), credits, and other assistance (through net accumulation of foreign currency claims from the sale of agricultural commodities). *Grants* are transfers for which no payment is expected (other than a limited percentage of the foreign currency "counterpart" funds generated by the grant), or which at most involve an obligation on the part of the receiver to extend aid to the United States or other countries to achieve a

common objective. *Credits* are loan disbursements or transfers under other agreements which give rise to specific obligations to repay, over a period of years, usually with interest. All known returns to the U.S. government stemming from grants and credits (reverse grants, returns of grants, and payments of principal) are taken into account in net grants and net credits, but no allowance is made for interest or commissions. *Other assistance* represents the transfer of U.S. farm products in exchange for foreign currencies (plus, since enactment of Public Law 87-128, currency claims from principal and interest collected on credits extended under the farm products program), less the government's disbursements of the currencies as grants, credits, or for purchases. The net acquisition of currencies represents net transfers of resources to foreign countries under the agricultural programs, in addition to those classified as grants or credits.

In 1952, economic, technical, and military aid programs were combined under the Mutual Security Act, which in turn was followed by the Foreign Assistance Act passed in 1961. Appropriations to provide military assistance were also made in the Department of Defense Appropriation Act (rather than the Foreign Assistance Appropriation Act) beginning in 1966 for certain countries in Southeast Asia and in other legislation concerning programs for specific countries (such as Israel). Figures on activity under the Foreign Assistance Act as reported in the *Foreign Grants and Credits* series differ from data published by AID or its immediate predecessors, due largely to differences in reporting, timing, and treatment of particular items.

Exports—The Census Bureau compiles export data primarily from Shipper's Export Declarations required to be filed with customs officials for shipments leaving the United States. They include U.S. exports under mutual security programs and exclude shipments to U.S. Armed Forces for their own use.

The value reported in the export statistics is generally equivalent to a free alongside ship (f.a.s.) value at the U.S. port of export, based on the transaction price, including inland freight, insurance, and

other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. This value, as defined, excludes the cost of loading merchandise aboard the exporting carrier and also excludes freight, insurance, and any other charges or transportation and other costs beyond the U.S. port of exportation. The country of destination is defined as the country of ultimate destination or country where the merchandise is to be consumed, further processed, or manufactured, as known to the shipper at the time of exportation. When ultimate destination is not known, the shipment is statistically credited to the last country to which the shipper knows the merchandise will be shipped in the same form as exported.

Effective January 1990, the United States began substituting Canadian import statistics for U.S. exports to Canada. As a result of the data exchange between the United States and Canada, the United States has adopted the Canadian import exemption level for its export statistics based on shipments to Canada.

Data are estimated for shipments valued under \$2,501 to all countries, except Canada, using factors based on the ratios of low-valued shipments to individual country totals.

Prior to 1989, exports were based on Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Beginning in 1989, Schedule B classifications are based on the Harmonized System and coincide with the Standard International Trade Classification, Revision 3. This revision will affect the comparability of most export series beginning with the 1989 data for commodities.

Imports—The Census Bureau compiles import data from various customs forms required to be filed with customs officials. Data on import values are presented on two valuations bases in this section: The c.i.f. (cost, insurance, and freight) and the customs import value (as appraised by the U.S. Customs Service in accordance with legal requirements of the Tariff Act of 1930, as amended). This latter valuation, primarily used for collection of

import duties, frequently does not reflect the actual transaction value. Country of origin is defined as country where the merchandise was grown, mined, or manufactured. If country of origin is unknown, country of shipment is reported.

Imports are classified either as "General imports" or "Imports for consumption." *General imports* are a combination of entries for immediate consumption, entries into customs bonded warehouses, and entries into U.S. Foreign Trade Zones, thus generally reflecting total arrivals of merchandise. *Imports for consumption* are a combination of entries for immediate consumption, withdrawals from warehouses for consumption, and entries of merchandise into U.S. customs territory from U.S. Foreign Trade Zones, thus generally reflecting the total of the commodities entered into U.S. consumption channels.

Beginning in 1989, import statistics are based on the Harmonized Tariff Schedule

of the United States, which coincides with import Standard International Trade Classification, Revision 3. This revision will affect the comparability of most import series beginning with the 1989 data.

Area coverage—Except as noted, the geographic area covered by the export and import trade statistics is the United States Customs area (includes the 50 states, the District of Columbia, and Puerto Rico), the U.S. Virgin Islands (effective January 1981), and U.S. Foreign Trade Zones (effective July 1982). Data for selected tables and total values for 1980 have been revised to reflect the U.S. Virgin Islands' trade with foreign countries, where possible.

Statistical reliability—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

NA Not available. ¹ Excludes exports of goods under U.S. military agency sales contracts identified in census export documents, and U.S. military agency sales contracts identified in census import documents, and reflects various other adjustments for valuation, coverage, and timing) of census statistics to balance of payments basis. ² Includes some goods: Mainly military equipment; major equipment, other materials, supplies, and petroleum products purchased abroad by U.S. military agencies; and fuels purchased by airline and steamship operators. ³ Includes transfers of goods and services under U.S. military grant programs. ⁴ These lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. The definition of imports is revised to include U.S. parents' payments to foreign affiliates and to exclude U.S. affiliates' receipts from foreign parents. ⁵ The "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. government. ⁶ Includes sales of foreign obligations to foreigners. Conceptually, "balance on current account" is equal to "net foreign investment" in the national income and product accounts (NIPAs). However, the foreign transactions account in the NIPAs (a) includes adjustments to the international transactions accounts for the treatment of insurance carriers and private noninsured pension plans. (b) includes adjustments for the different geographical treatment of transactions with U.S. territories and Puerto Rico, and (c) includes services furnished without payment by financial pension plans except life insurance carriers and private noninsured pension plans.

Table 1254. U.S. Businesses Acquired or Established by Foreign Direct Investors—Investment Outlays by Industry of U.S. Business Enterprise and Country of Ultimate Beneficial Owner: 2000 to 2007

[In millions of dollars (335,629 represents \$335,629,000,000). Foreign direct investment is the ownership or control directly or indirectly, by one foreign individual branch, partnership, association, trust, corporation, or government of 10 percent or more of the voting securities of a U.S. business enterprise or an equivalent interest in an unincorporated one. Data represent number and full cost of acquisitions of existing U.S. business enterprises, including business segments or operating units of existing U.S. business enterprises and establishments of new enterprises. Investments may be made by the foreign direct investor itself, or indirectly by an existing U.S. affiliate of the foreign direct investor. Covers investments in U.S. business enterprises with assets of over \$1 million, or ownership of 200 acres of U.S. land]

Table 1256. U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Selected Country: 2000 to 2007

In millions of dollars (1,316,247 represents \$1,316,247,000,000). U.S. investment abroad is the ownership or control by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or an equivalent interest in an unincorporated foreign business enterprise. Negative position can occur when a U.S. parent company's liabilities to the foreign affiliate are greater than its equity in and loans to the foreign affiliate.

- Represents zero. Z Less than \$500,000. ¹ Includes other countries not shown separately. ² In recent years, significant amounts of foreign assistance has been reported on a regional, interregional, and worldwide basis. Country totals in this table may understate actual assistance to many countries. ³ Includes European Atomic Energy Community, European Coal and Steel Community, European Payments Union, European Productivity Agency, North Atlantic Treaty Organization, and Organization for European Economic Cooperation. ⁴ In 1992, some successor countries assumed portions of outstanding credits of the former Yugoslavia (assignment of the remaining portions is pending). Subsequent negative totals reflect payments to the United States on these assumed credits which were greater than the extension of new credits and grants to these countries. ⁵ United Nations Relief and Works Agency for Palestine refugees. ⁶ Excludes transactions with Commonwealth of the Northern Mariana Islands after October 1986; includes transactions with Federated States of Micronesia, Republic of the Marshall Islands, and Republic of Palau. Includes transfer of Panama Canal to the Republic of Panama on Dec. 1999. ⁷ Includes Andean Development Corporation, Caribbean Development Bank, Central American Bank for Economic Integration, Eastern Caribbean Central Bank, Inter-American Institute of Agricultural Science, Organizations of American States, and Pan American Health Organization. ⁸ Foreign assistance to Iraq in 1991-96 was direct humanitarian assistance to ethnic minorities of Northern Iraq after the conflict in the Persian Gulf. Foreign assistance to Iraq in 2003, 2004, 2005, 2006, and 2007 includes Iraq Reconstruction and humanitarian assistance.

Z Less than \$50 million. ¹ Totals shown for exports reflect the value of estimated parcel post and Special Category shipments, and adjustments for undocumented exports to Canada are not distributed by coastal area or customs district. The value of bituminous coal exported through Norfolk, VA; Charleston, SC; and Mobile, AL, is reflected in the total but not distributed by district. ² Excludes exports of bituminous coal.

Table 1266. U.S. Exports, Imports, and Merchandise Trade Balance, by Country: 2003 to 2007

[In millions of dollars (724,771 represents \$724,771,000,000). Includes silver ore and bullion. Country totals include exports of special category commodities, if any. Data include nonmonetary gold and include trade of Virgin Islands with foreign countries. For methodology, see Foreign Trade Statistics in Appendix III. Minus sign (-) denotes an excess of imports over exports]

Table 1270. U.S. Exporting Companies Profile by Employment-Size Class: 2000 and 2006

[[668,310 represents \$668,310,000,000.] Based on data from export trade documents and the Business Register. For information on data limitations, see the Technical Documentation in the source]

| Employment-size class | Number of exporters | | Known export value ¹ (mil. dol.) | | Percent of— | | | |
|-----------------------------|---------------------|----------------|---|----------------|---------------------|--------------|--------------------|--------------|
| | 2000 | 2006 | 2000 | 2006 | Number of exporters | | Known export value | |
| | | | | | 2000 | 2006 | 2000 | 2006 |
| All companies, total | 246,452 | 245,945 | 668,310 | 910,465 | 100.0 | 100.0 | 100.0 | 100.0 |
| No employees | 74,772 | 76,115 | 47,024 | 63,022 | 30.3 | 30.9 | 7.0 | 6.9 |
| 1 to 19 employees | 96,268 | 101,254 | 45,272 | 61,850 | 39.1 | 41.2 | 6.8 | 6.8 |
| 20 to 49 employees | 31,362 | 30,178 | 21,262 | 30,714 | 12.7 | 12.3 | 3.2 | 3.4 |
| 50 to 99 employees | 16,988 | 15,524 | 19,711 | 27,335 | 6.9 | 6.3 | 2.9 | 3.0 |
| 100 to 249 employees | 13,685 | 11,775 | 32,192 | 44,170 | 5.6 | 4.8 | 4.8 | 4.9 |
| 250 to 499 employees | 5,454 | 4,441 | 27,397 | 35,908 | 2.2 | 1.8 | 4.1 | 3.9 |
| 500 or more employees | 7,923 | 6,658 | 475,453 | 647,466 | 3.2 | 2.7 | 71.1 | 71.1 |

¹ Known value is defined as the value of exports by known exporters, i.e., those export transactions that could be matched to specific companies. Export values are on f.a.s. or "free alongside ship basis."

Section 29

Puerto Rico and the Island Areas

This section presents summary economic and social statistics for Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands. Primary sources are the decennial censuses of population and housing, county business patterns, and the Puerto Rico Community Survey conducted by the U.S. Census Bureau; the annual *Vital Statistics of the United States*, issued by the National Center for Health Statistics; and the annual *Income and Product* of the Puerto Rico Planning Board.

Jurisdiction—The United States gained jurisdiction over these areas as follows: the islands of *Puerto Rico* and *Guam*, surrendered by Spain to the United States in December 1898, were ceded to the United States by the Treaty of Paris, ratified in 1899. Puerto Rico became a commonwealth on July 25, 1952, thereby achieving a high degree of local autonomy under its own constitution. The *U.S. Virgin Islands*, comprising 50 islands and cays, was purchased by the United States from Denmark in 1917. *American Samoa*, a group of seven islands, was acquired by the United States in accordance with a convention among the United States, Great Britain, and Germany, ratified in 1900 (Swains Island was annexed in 1925). By an agreement approved by the Security Council and the United States, the Northern Mariana Islands, previously under Japanese mandate, was administered by the United States between 1947 and 1986 under the United Nations trusteeship system. The Northern Mariana Islands became a commonwealth in 1986.

Censuses—Because characteristics of the Puerto Rico and the Island Areas differ, the presentation of census data for them

is not uniform. The 1960 Census of Population covered all of the places listed above except the Northern Mariana Islands (their census was conducted in April 1958 by the Office of the High Commissioner), while the 1960 Census of Housing also excluded American Samoa. The 1970, 1980, 1990, and 2000 Censuses of Population and Housing covered all five areas. Beginning in 1967, Congress authorized the economic censuses, to be taken at 5-year intervals, for years ending in "2" and "7." Prior economic censuses were conducted in Puerto Rico for 1949, 1954, 1958, and 1963 and in Guam and the U.S. Virgin Islands for 1958 and 1963. In 1967, the census of construction industries was added for the first time in Puerto Rico; in 1972, the U.S. Virgin Islands and Guam were covered; and in 1982, the economic census was taken for the first time for the Northern Mariana Islands.

Puerto Rico Community Survey—The Puerto Rico Community Survey (PRCS) began in 2005 and is a critical element in the Census Bureau's reengineered 2010 census plan. The American Community Survey is the equivalent of the PRCS for the United States (50 states, and District of Columbia). The PRCS collects and produces population and housing information every year instead of every 10 years. About 36,000 households are surveyed each year from across every municipio in Puerto Rico.

Information in other sections—In addition to the statistics presented in this section, other data are included as integral parts of many tables showing distribution by states in various sections of the *Abstract*. See "Puerto Rico and the Island Areas" in the Index. For definition and explanation of terms used, see Sections 1, 2, 4, 17, 20, 21, and 22.

Table 1272. Estimated Resident Population With Projections: 1980 to 2025

[In thousands (3,210 represents 3,210,000). Population as of July 1. Population data generally are de-facto figures for the present territory. Data for 1990 to 2000 are adjusted to the 2000 Census of Population for Puerto Rico only. See text, Section 30, for general comments regarding the data. For details of methodology, coverage, and reliability, see source]

| Area | Historical | | | | | | Projected | | | |
|--------------------------|------------|-------|-------|-------|-------|-------|-----------|-------|-------|-------|
| | 1980 | 1990 | 2000 | 2005 | 2007 | 2008 | 2010 | 2015 | 2020 | 2025 |
| Puerto Rico | 3,210 | 3,537 | 3,816 | 3,912 | 3,943 | 3,958 | 3,986 | 4,044 | 4,080 | 4,092 |

Section 30

International Statistics

This section presents statistics for the world as a whole and for many countries on a comparative basis with the United States. Data are shown for population, births and deaths, social and industrial indicators, finances, agriculture, communication, and military affairs.

Statistics of the individual nations may be found primarily in official national publications, generally in the form of yearbooks, issued by most of the nations at various intervals in their own national languages and expressed in their own or customary units of measure. (For a listing of selected publications, see Guide to Sources.) For handier reference, especially for international comparisons, the United Nations Statistics Division compiles data as submitted by member countries and issues a number of international summary publications, generally in English and French. Among these are the *Statistical Yearbook*; the *Demographic Yearbook*; *International Trade Statistics Yearbook*; *National Accounts Statistics: Main Aggregates and Detailed Tables*; *Population and Vital Statistics Reports* (quarterly); the *Monthly Bulletin of Statistics*; and the *Energy Statistics Yearbook*. Specialized agencies of the United Nations also issue international summary publications on agricultural, labor, health, and education statistics. Among these are the *Production Yearbook* and *Trade Yearbook* issued by the Food and Agriculture Organization, the *Yearbook of Labour Statistics* issued by the International Labour Office, *World Health Statistics* issued by the World Health Organization, and the *Statistical Yearbook* issued by the Educational, Scientific, and Cultural Organization.

The U.S. Census Bureau presents estimates and projections of basic demographic measures for countries and regions of the world in the *World Population Reports* (WP) series. The *International Population Reports* (Series IPC), and *International Briefs* (Series IB) also present population figures for many foreign

countries. Detailed population statistics are also available from the Census Bureau's International Data Base (<http://www.census.gov/ipc/www/idb/>).

The International Monetary Fund (IMF) and the Organization for Economic Cooperation and Development (OECD) also compile data on international statistics. The IMF publishes a series of reports relating to financial data. These include *International Financial Statistics*, *Direction of Trade*, and *Balance of Payments Yearbook*, published in English, French, and Spanish. The OECD publishes a vast number of statistical publications in various fields such as economics, health, and education. Among these are *OECD in Figures*, *Main Economic Indicators*, *Economic Outlook*, *National Accounts*, *Labour Force Statistics*, *OECD Health Data*, and *Education at a Glance*.

Statistical coverage, country names, and classifications—Problems of space and availability of data limit the number of countries and the extent of statistical coverage shown. The list of countries included and the spelling of country names are based almost entirely on the list of independent nations, dependencies, and areas of special sovereignty provided by the U.S. Department of State.

In recent years, several important changes took place in the status of the world's nations. In 1991, the Soviet Union broke up into 15 independent countries: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan.

In the South Pacific, the Marshall Islands, Micronesia, and Palau gained full independence from the U.S. in 1991.

Following the breakup of the Socialist Federal Republic of Yugoslavia in 1992, the United States recognized Bosnia and Herzegovina, Croatia, Slovenia, and Macedonia as independent countries.

The Treaty of Maastricht created the European Union (EU) in 1992 with 12 member countries. The EU is not a state intended to replace existing states, but it is more than just an international organization. Its member states have set up common institutions to which they delegate some of their sovereignty so that decisions on specific matters of joint interest can be made democratically at a European level. This pooling of sovereignty is also called "European integration." The EU has grown in size with successive waves of accessions in 1995, 2004, and 2007. The 27 current members of the EU are: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

In 1992, the EU decided to establish economic and monetary union (EMU), with the introduction of a single European currency managed by a European Central Bank. The single currency—the euro—became a reality on January 1, 2002, when euro notes and coins replaced national currencies in 12 of the then 15 countries of the European Union (Belgium, Germany, Greece, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, and Finland). Since then, 12 countries have become members of the EU, but Slovenia, Malta, and Cyprus have been the only new members of the EU to adopt the euro as the national currency.

On January 1, 1993, Czechoslovakia was succeeded by two independent countries: the Czech Republic and Slovakia. Eritrea announced its independence from Ethiopia in April 1993 and was subsequently recognized as an independent nation by the United States. In May of 2002, Timor-Leste won independence from Indonesia.

Serbia and Montenegro, both former republics of Yugoslavia, became independent of one another on May 31, 2006. This separation is seen in the population estimates tables (Tables 1288, 1290, and 1305), but some tables still show both countries as combined. On February 17, 2008, Kosovo declared its independence from Serbia, making it the world's newest independent state.

The population estimates and projections used in Tables 1285–1288, 1290, and 1295 were prepared by the Census Bureau. For each country, the data on population, by age and sex, fertility, mortality, and international migration were evaluated and, where necessary, adjusted for inconsistencies and errors in the data. In most instances, comprehensive projections were made by the component method, resulting in distributions of the population by age and sex and requiring an assessment of probable future trends of fertility, mortality, and international migration.

Economic associations—The Organization for European Economic Co-Operation (OEEC), a regional grouping of Western European countries established in 1948 for the purpose of harmonizing national economic policies and conditions, was succeeded on September 30, 1961, by the Organization for Economic Cooperation and Development (OECD). The member nations of the OECD are Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovakia, South Korea, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

Quality and comparability of the data—The quality and comparability of the data presented here are affected by a number of factors:

- (1) The year for which data are presented may not be the same for all subjects for a particular country or for a given subject for different countries, though the data shown are the most recent available. All such variations have been noted. The data shown are for calendar years except as otherwise specified.
- (2) The bases, methods of estimating, methods of data collection, extent of coverage, precision of definition, scope of territory, and margins of error may vary for different items within a particular country, and for like items for different countries. Footnotes and headnotes to the tables give a few of the major time-periods and coverage qualifications

attached to the figures; considerably more detail is presented in the source publications. Many of the measures shown are, at best, merely rough indicators of magnitude.

(3) Figures shown in this section for the United States may not always agree with figures shown in the preceding sections. Disagreements may be attributable to the use of differing original sources, a difference in the definition of geographic limits (the 50 states, conterminous United States only, or the United States including certain outlying areas and possessions), or to possible adjustments made in the United States' figures by other sources in order to make them more comparable with figures from other countries.

International comparisons of national accounts data

national accounts data—In order to compare national accounts data for different countries, it is necessary to convert each country's data into a common unit of currency, usually the U.S. dollar. The market exchange rates, which are often used in converting national currencies, do not necessarily reflect the relative purchasing power in the various countries. It is necessary that the goods and services produced in different countries be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (see Tables 1305, 1306, and 1347) instead of exchange rates is intended to achieve this objective.

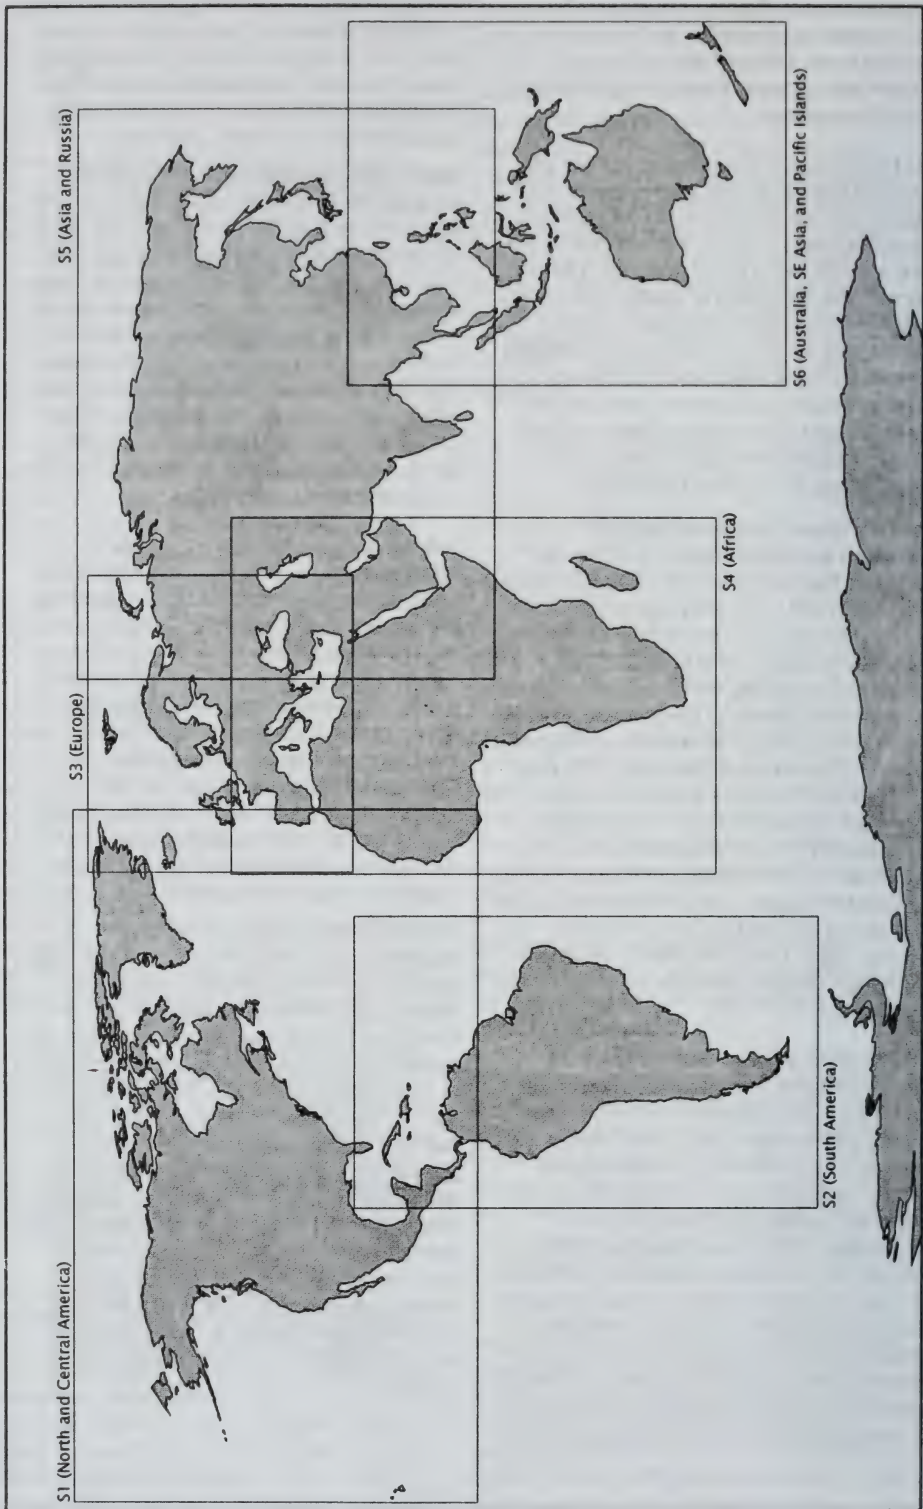

The method used to present the data shown in Table 1306 is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices. By dividing the ratio of the gross domestic products of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power parity (PPP) between the two currencies concerned. PPPs show how many units of currency are needed in one country to buy the same amount of goods and

services that one unit of currency will buy in the other country. For further information, see *National Accounts, Main Aggregates, Volume I*, issued annually by the Organisation for Economic Cooperation and Development, Paris, France.

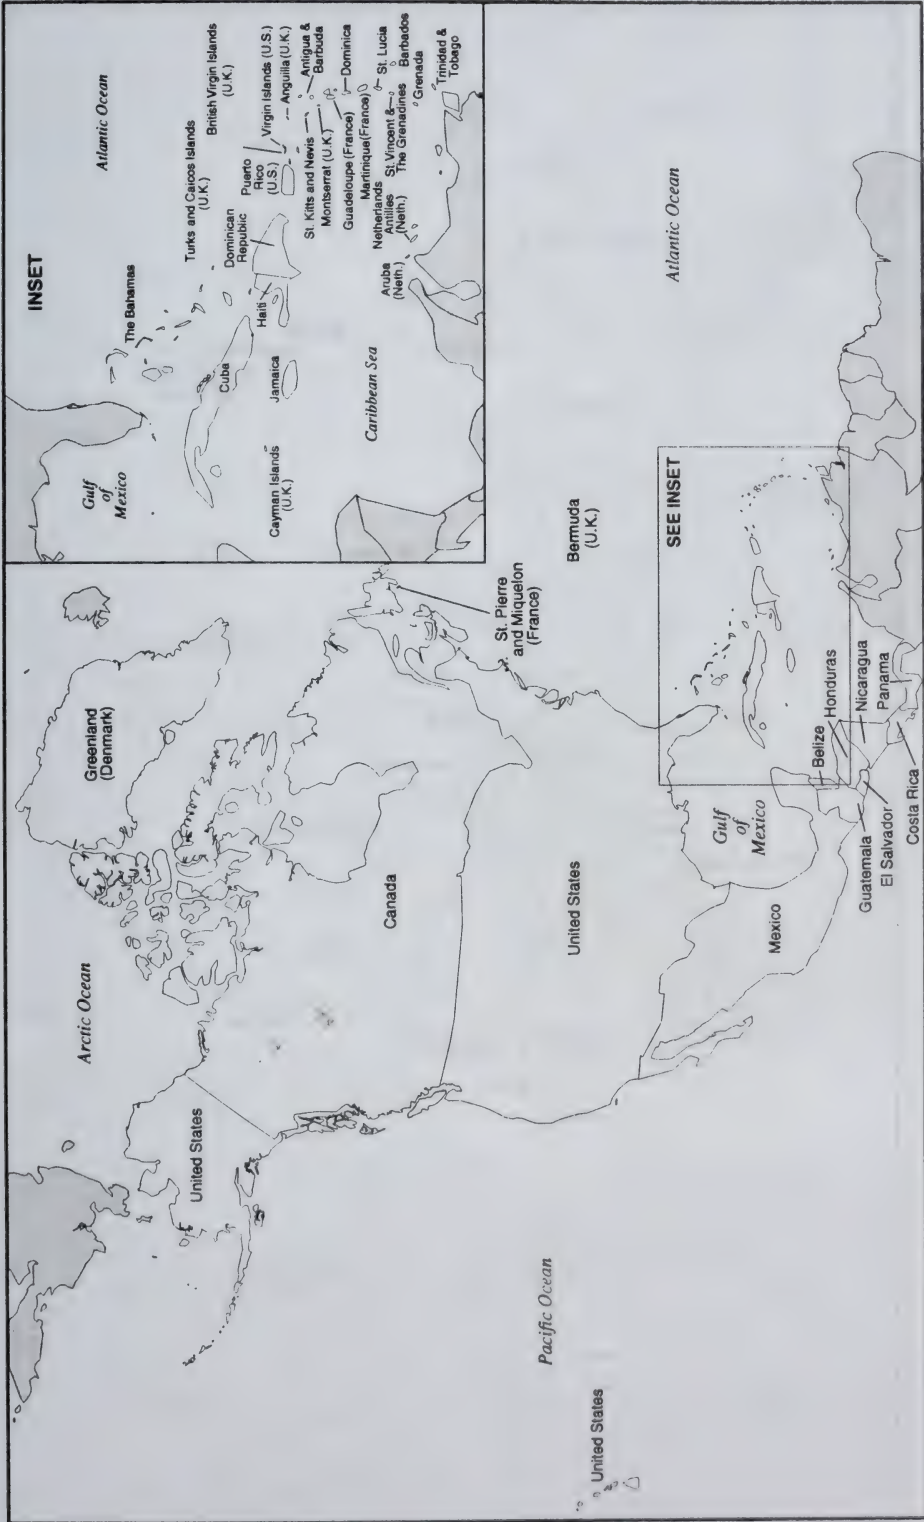

International Standard Industrial Classification—The original version of the International Standard Industrial Classification of All Economic Activities (ISIC) was adopted in 1948. Wide use has been made both nationally and internationally in classifying data according to kind of economic activity in the fields of production, employment, national income, and other economic statistics. A number of countries have utilized the ISIC as the basis for devising their industrial classification scheme.

Substantial comparability has been attained between the industrial classifications of many other countries, including the United States and the ISIC by ensuring, as far as practicable, that the categories at detailed levels of classification in national schemes fitted into only one category of the ISIC. The United Nations, the International Labour Organization, the Food and Agriculture Organization, and other international bodies have utilized the ISIC in publishing and analyzing statistical data. Revisions of the ISIC were issued in 1958, 1968, and 1989.

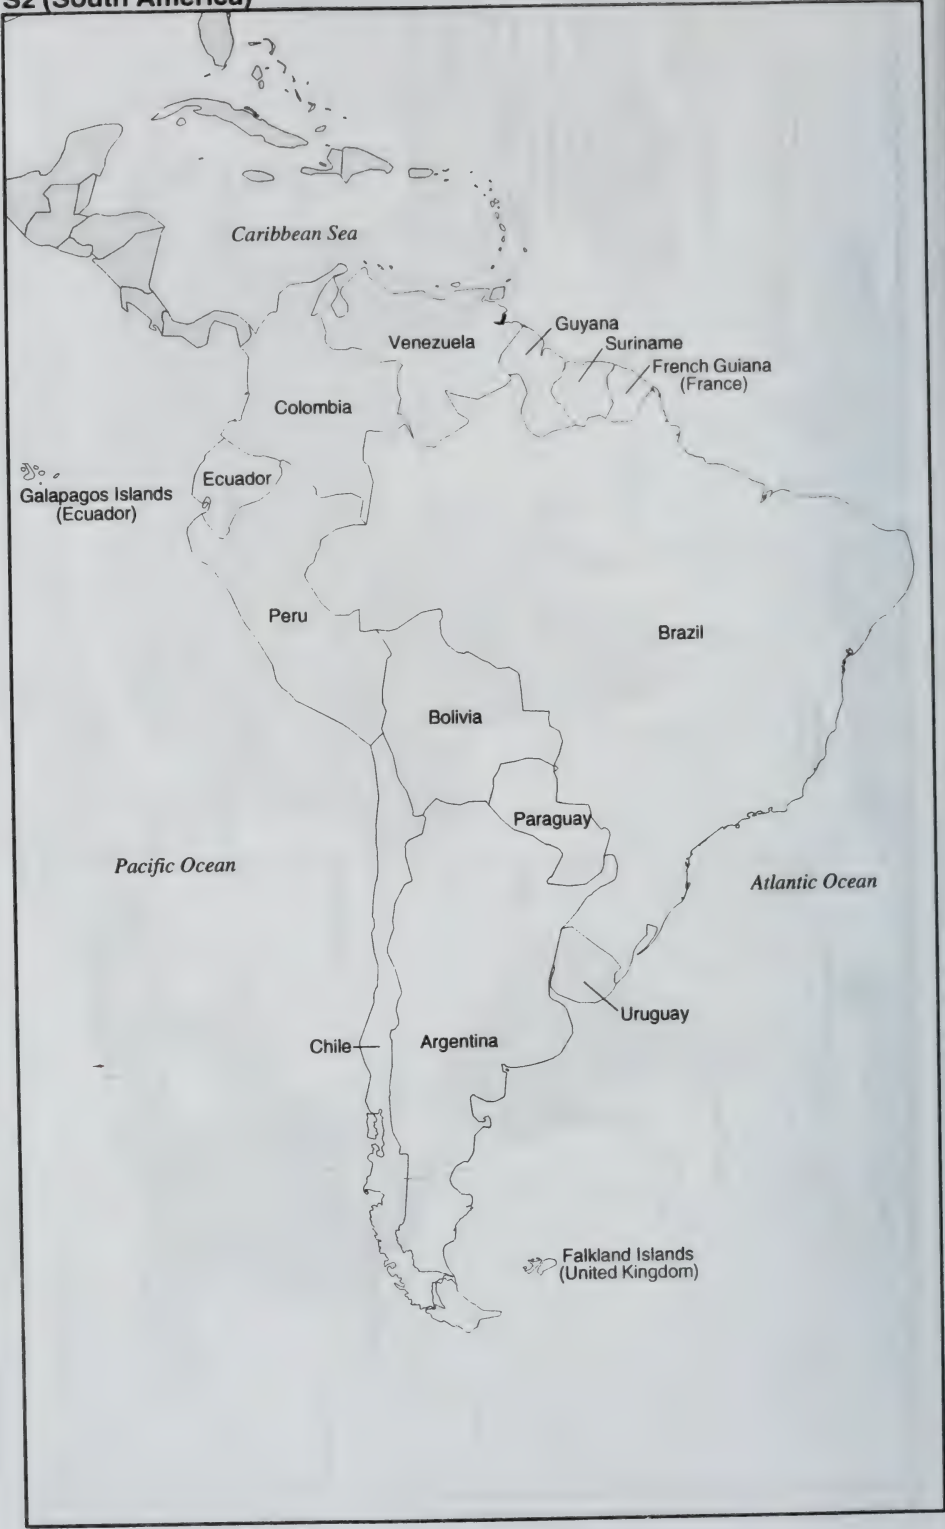

International maps—A series of regional world maps is provided on pages 806–812. References are included in Table 1288 for easy location of individual countries on the maps. The Robinson map projection is used for this series of maps. A map projection is used to portray all or part of the round Earth on a flat surface, but this cannot be done without some distortion. For the Robinson projection, distortion is very low along the Equator and within 45 degrees of the center but is greatest near the poles. For additional information on map projections and maps, please contact the Earth Science Information Center, U.S. Geological Survey, 507 National Center, Reston, VA 22092.

¹ Estimates and projections for France now include the 4 overseas departments of French Guiana, Guadeloupe, Martinique, and Reunion in the national total. These areas will now be included in the same regions as France (Europe) and not in the regions where they were included in prior releases (French Guiana in South America, Guadeloupe and Martinique in North America, and Reunion in Africa). Saint Barthelemy and Saint Martin recently voted to become French overseas collectivities apart from Guadeloupe and are included in the totals for North America.

Table 1288. Population by Country or Area: 1990 to 2010

[5,282,372 represents 5,282,372,000. Population data generally are de facto figures for the present territory. Population estimates were derived from information available as of winter 2007-08. See text of this section for general comments concerning the data. For details of methodology, coverage, and reliability, see coverage, and reliability, see source. Minus sign (-) indicates decrease]

X Not applicable. Z Less than 0.05 percent or less than one person per square mile. ¹ Computed by the exponential method. For explanation of average annual percent change, see Guide to Tabular Presentation. ² With the establishment of diplomatic relations with China on January 1, 1979, the U.S. government recognized the People's Republic of China as the sole legal government of China and acknowledged the Chinese position that there is only one China and that Taiwan is part of China. ³ "Congo" is the official short-form name for both the Republic of Congo and the Democratic Republic of the Congo. To distinguish one from the other the U.S. Dept. of State adds the capital in parentheses. This practice is unofficial and provisional. ⁴ Data for France include the overseas departments of French Guiana, Guadeloupe, Martinique, and Reunion. Saint Barthelemy and Saint Martin recently voted to become French overseas collectivities apart from Guadeloupe and are now listed individually. ⁵ Data for 1990 are for former West Germany and East Germany combined. ⁶ The Gaza Strip and West Bank are Israeli occupied with interim status subject to Israeli/Palestinian negotiations. The final status is yet to be determined.

NA Not available. ¹ Data are from population registers of foreigners except for France, Greece, Mexico, and Poland (census), Ireland and the United Kingdom (Labour Force Survey), Portugal (residence permits), Australia (inter- and post-censal estimates), and the United States (Current Population Survey). ² Includes unemployed except for Belgium, Greece, Norway, Luxembourg, Netherlands, and the United Kingdom. Germany, Luxembourg, and Netherlands include cross-border workers. Belgium and Italy include the self-employed. Data for Austria, Germany, and Luxembourg are from social security registers, and for Denmark, from the register of population. Data for Italy, Spain, and Switzerland are from residence or work permits. Figures for Japan and Netherlands are estimates. Data for other countries are from labor force surveys. ³ Or latest period available. ⁴ Labor force data are for western Germany only. ⁵ Children under 18 who are registered on their parents' permit are not counted. ⁶ Data are based on registered foreign nationals which include foreigners staying in Japan for more than 90 days. ⁷ Number of foreigners with a residence permit. Permits of short duration (less than 6 months) as well as students are excluded. ⁸ Number of foreigners with an annual residence permit or with a settlement permit (permanent permit). Seasonal and frontier workers are excluded. ⁹ Estimated from the annual labour force survey. Fluctuations from year to year may be due to sampling error.

Table 1293. Single-Parent Households: 1980 to 2007

[In thousands (6,061 represents 6,061,000). For the United Kingdom in 1981, children are defined as those under 15 and those who are 15, 16, or 17 and attended school full-time; for later years, children are defined as those under 16 and those who are 16 or 17 and attend school full-time. For Ireland, children are defined as those under 15. For France, children are defined as those under 25. For Canada for 2001 onward and for Germany for 1995 onward, children are of all ages. For all other countries, children are defined as children living at home, or away at school, under 18. Data are generally for the entire year, but in some instances they are only for a particular month within the year]

NA Not available. ¹ May include unmarried cohabitating couples. Such couples are explicitly included under married couples in Canada, Denmark, Ireland, France, the Netherlands, and Sweden. In Germany, cohabitants are grouped with married couples beginning in 2000. In other countries, some unmarried cohabitants are included as married couples, while some are classified under "other households." ² Children are defined as unmarried children living at home according to the following age limits: under 18 years old in the United States, Canada (1981-96), Japan, Denmark, Sweden, and the United Kingdom, except that the United Kingdom includes 15-, 16-, and 17-year-olds in 1981 and 16- and 17-year-olds thereafter only if they are attending school full-time; under 25 years old in France; and children of all ages in Canada (2001 onward), Germany, Ireland, and the Netherlands. ³ Includes both family and nonfamily households not elsewhere classified. These households comprise, for example, siblings residing together, other households composed of relatives, and households made up of roommates. Some unmarried cohabitating couples may also be included in the "other" group. See footnote 1. ⁴ Break in series. ⁵ From family-based statistics. However, one person living alone constitutes a family in Denmark. In this respect, the Danish data are closer to household statistics. ⁶ Great Britain only (excludes Northern Ireland).

¹ Number of births during 1 year per 1,000 persons (based on midyear population). ² Number of deaths during 1 year per 1,000 persons (based on midyear population). ³ Number of deaths of children under 1 year of age per 1,000 live births in a calendar year. ⁴ Average number of children that would be born if all women lived to the end of their childbearing years and, at each year of age, they experienced the birth rates occurring in the specified year. ⁵ See footnote 2, Table 1288. ⁶ See footnote 3, Table 1288. ⁷ France now includes the overseas departments of French Guiana, Guadeloupe, Martinique, and Reunion. Saint Barthelemy and Saint Martin voted to become French overseas collectivities apart from Guadeloupe and are now listed individually.

Table 1298. **Percentage of the Adult Population Considered to be Obese: 2005**

[Obesity rates are defined as the percentage of the population with a Body Mass Index (BMI) over 30 kg/m². The BMI is a single number that evaluates an individual's weight status in relation to height (weight/height², with weight in kilograms and height in meters). For Australia, the United Kingdom, and the United States, figures are based on health examinations, rather than self-reported information. Obesity estimates derived from health examinations are generally higher and more reliable than those coming from self-reports because they preclude any misreporting of people's height and weight. However, health examinations are only conducted regularly in a few countries. For more information on methods by country, see <<http://www.irdes.fr/EspaceAnglais/home.html>>]

| Country | 2005 | Country | 2005 | Country | 2005 |

Table 1302. Educational Performance: 2005 and 2006

[Tertiary-type A includes education leading to a BA, Master's, or equivalent degree, and advanced research programs. Performance figures were gathered from the Program for International Student Assessment (PISA), an internationally standardized assessment jointly developed by participating countries, which takes place in 3-yearly cycles. To implement PISA, each of the participating countries selects a nationally representative sample of 15-year-olds, regardless of grade level. Tests are typically administered to between 4,500 and 10,000 students in each country]

| Country | Student performance on the combined reading, scientific, and mathematical literacy scales (2006) | | | Educational attainment of adult population and current graduation rates (2005) (percent) | |
|--------------------------|--|--|--|--|---|
| | Mean score on the combined reading literacy scale ¹ | Mean score on the mathematical literacy scale ² | Mean score on the scientific literacy scale ³ | Upper secondary or higher attainment ⁴ (25-64-year-olds) | Tertiary type A attainment ⁵ (25-64-year-olds) |

NA Not available. ¹ Gross national income calculated using the World Bank Atlas method; for details, see source. ² For explanation of Purchasing Power Parity, see headnote, Table 1306. ³ The estimate is based on regression; others are extrapolated from the latest International Comparison Program benchmark estimates. ⁴ See footnote 2, Table 1288. ⁵ See footnote 3, Table 1288. ⁶ Include the French overseas departments of French Guiana, Guadeloupe, Martinique, and Reunion.

⁷ Estimated to be lower middle income (\$96-\$3,595). ⁸ Data refer to mainland Tanzania only.

Table 1306. Real GDP per Capita and per Employed Persons by Country: 1980 to 2006

[U.S. figures based on the System of National Income and Product Accounts (NIPA) from the Bureau of Economic Analysis. All other countries, based on the 1993 United Nations System of National Accounts. Per capita data based on total resident population. Real GDP is a macroeconomic measure of the size of an economy adjusted for price changes and inflation. Employed data include people serving in the armed forces for some countries. Real dollars are calculated based on 2002 Purchasing Power Parities (PPPs). PPPs are currency conversion rates used to convert GDPs expressed in different currencies to a common value (U.S. dollars in this case). A PPP for a given country is the number of national currency units needed to buy the specific basket of goods and services that one unit of currency will buy in the United States. See text, this section]

Table 1308. Sectoral Contributions to Gross Value Added: 1995 and 2005

[In percent. According to the 1993 System of National Accounts (SNA) and the International Standard Industrial Classification (ISIC), Revision 3. Value added is estimated at basic prices and includes financial intermediation services indirectly measured (FISIM). It represents an industry's contribution to national GDP and is calculated as the difference between production and intermediate inputs. Value added comprises labor costs, consumption of fixed capital, indirect taxes less subsidies, and net operating surplus and mixed income]

Table 1310. Annual Percent Change in Labor Productivity and Hours Worked by Country: 1995 to 2007

[Change for period shown. For OECD countries and Eastern Europe, labor productivity growth refers to the growth in gross domestic product per hour worked. Data are derived from an annual database maintained by the Groningen Growth and Development Centre at the University of Groningen, Netherlands, in association with The Conference Board. Growth for regional aggregates is calculated based on the sum of gross domestic product divided by the sum of total hours worked. Gross domestic product for each country was converted based on the 2005 OECD benchmark for purchasing power parities and updated to 2007 using the aggregate inflation rate for each country relative to U.S. inflation. Minus sign (-) indicates decrease]

| Country | Labor productivity | | Total hours worked | | Country | Labor productivity | | Total hours worked | |

Table 1312. Comparative Price Levels—Selected OECD Countries: 2008

[Purchasing power parities (PPPs) are the rates of currency conversion that eliminate the differences in price levels between countries. Comparative price levels are defined as the ratios of PPPs to exchange rates. The PPPs are given in national currency units per U.S. dollar. The table is to be read vertically. Each column shows the number of specified monetary units needed in each of the countries listed to buy the same representative basket of consumer goods and services. In each case the representative basket costs a hundred units in the country whose currency is specified. Example of data: An item that costs \$1.00 in the United States would cost \$1.28 (U.S. dollars) in Japan]

| Country | United States (U.S. dollar) | Canada (Canadian dollar) | Mexico (Mexican peso) | Japan (yen) | France (euro) | Germany (euro) | Italy (euro) | United Kingdom (pound) |

Table 1313. Indexes of Living Costs Abroad: 2008

[As of January 2008. Washington, D.C. = 100. Indexes compare the costs in dollars of representative goods and services (excluding housing and education) purchased at the foreign location and the cost of comparable goods and services in the Washington, D.C. area. The indexes are computed for private American employees and exclude special advantages that may be available only to U.S. government employees. The indexes are place-to-place comparisons at specific times and currency exchange rates. They cannot be used for measuring cost changes over time at a foreign location. Since the indexes reflect only the expenditure pattern and living costs of American families, they should not be used to compare living costs of Americans in the United States with the living costs of foreign nationals living in their own country.]

¹ The relative living cost measures living costs for private American citizens living abroad. It is a comparison of goods and services prices between the foreign post and Washington, D.C., with the price ratios weighted by the pattern of expenditure in Washington, D.C. Consequently, the relative living cost is a straight comparison of price levels between the post and Washington, D.C., but not necessarily a comparison of the cost of living abroad. ² See footnote 2, Table 1288. ³ See footnote 3, Table 1288. ⁴ There are no U.S. Government employees in Taiwan. The figures listed in this column represent a living cost comparison for American employees of the American Institute in Taiwan, who have some duty-free and other special benefits that may not be available to other Americans in Taiwan.

Table 1315. Gross Public Debt, Expenditures, and Receipts by Country: 1990 to 2007

[Percent of nominal gross domestic product. Gross debt includes one-off revenues from the sale of the mobile telephone licenses. Expenditures and receipts refer to the general government sector, which is a consolidation of accounts for the central, state, and local governments plus social security. Expenditures, or total outlays, are defined as current outlays plus capital outlays. Receipts cover current receipts, but exclude capital receipts. Nontax receipts consist of property income (including dividends and other transfers from public enterprises), fees, charges, sales, fines, capital transfers received by the general government, etc.). Minus sign (-) indicates deficit]

- Represents zero. NA Not available. X Not applicable. ¹ Term of the chamber is not fixed (i.e., renewals do not take place on the same date, but rather when individual mandates expire). ² With the establishment of diplomatic relations with China on January 1, 1979, the U.S. government recognized the People's Republic of China as the sole legal government of China and acknowledged the Chinese position that there is only one China and that Taiwan is part of China. ³ The Upper House figures on the distribution of seats do not include the 36 special rotating delegates appointed on an ad hoc basis, and all percentages given are therefore calculated on the basis of the 55 permanent seats.

¹ Estimates. ² European Union (EU) has been updated to EU-27 for 1999–2007, but 1995–98 remains EU-15 data. EU15: Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and United Kingdom. EU-25 added: Poland, Czech Republic, Hungary, Slovakia, Slovenia, Latvia, Lithuania, Estonia, Cyprus, and Malta. EU-27 added: Romania, Bulgaria. ³ See footnote 2, Table 1288. ⁴ As of June 2006, Serbia and Montenegro are separate countries.

Table 1342. **Selected Indexes of Manufacturing Activity by Country: 1990 to 2006**

[1992 = 100. Data relate to employees (wage and salary earners) in Belgium, and to all employed persons (employees, self-employed workers, and unpaid family workers) in the other countries. Minus sign (-) indicates decrease. For explanation of average annual percent change, see Guide to Tabular Presentation]

- Represents or rounds to zero. NA Not available. ¹ In Canada, France, Sweden, and the United Kingdom, compensation adjusted for employment taxes and government subsidies to estimate the actual labor cost to employers. ² Index of hourly compensation divided by the index of consumer prices to adjust for changes in purchasing power. ³ Indexes in national currency adjusted for changes in prevailing exchange rates.

Source: U.S. Bureau of Labor Statistics, *International Comparisons of Manufacturing Productivity and Unit Labor Cost Trends, Supplementary Tables, 1950-2006*, revised, 28 February 2008. See also <<http://www.bls.gov/fls/prodsupptabletoc.htm>>.

Table 1343. Indexes of Hourly Compensation Costs for Production Workers in Manufacturing by Country: 1980 to 2006

[United States = 100. Compensation costs include pay for time worked, other direct pay (including holiday and vacation pay, bonuses, other direct payments, and the cost of pay in kind), employer expenditures for legally required insurance programs and contractual and private benefit plans, and for some countries, other labor taxes. Data adjusted for exchange rates. Area averages are trade-weighted to account for difference in countries' relative importance to U.S. trade in manufactured goods. The trade weights used to compute the average compensation cost measures for selected economic groups are based on the relative dollar value of U.S. trade in manufactured commodities (exports plus imports) with each country or area in 2004; see source for detail]

| Korea, South | 49.82 | 83.77 | 54.44 | Vietnam | 32.23 | 18.17 | 2.34 |

NA Not available. ¹ Fixed telephone lines refer to telephone lines connecting a customer's terminal equipment (e.g. telephone set, facsimile machine) to the public switched telephone network (PSTN) and which have a dedicated port on a telephone exchange. Fixed telephone lines per 100 inhabitants is calculated by dividing the number of fixed telephone lines by the population and multiplying by 100. ² In many countries mainframe computers are used extensively, and thousands of users can be connected to a single mainframe computer; thus the number of PCs understates the total use of computers. ³ See footnotes 2, Table 1288.

Table 1354. Foreign Trade—Destination of Exports and Source of Imports for Selected Countries: 2005

In millions of dollars (4,945 represents \$4,945,000,000). Data represent all goods which add to or subtract from the stock of material resources of a country by entering (imports) or leaving (exports) its economic territory. Goods transported through a country (goods in transit) or temporarily admitted or withdrawn are not included. Countries use one of two trade systems—general or specific. A country uses the general trade system when its statistical territory coincides with its economic territory so that imports and exports include all goods entering or leaving its economic territory. Special trade systems cover goods that cross the customs frontier plus goods that are imported into and exported from custom-bounded areas. In this case, the statistical territory comprises only a particular part of the economic territory. For more information, see source.

Table 1355. International Tourism Arrivals, Expenditures, and Receipts—Leading Countries: 2000 to 2006

(Arrivals in thousands of nonresident tourists at national borders, excluding same-day visitors (77,190 represents 77,190,000); expenditures and receipts in millions of dollars. Receipts are dollars spent by foreign tourists on travel inside the country shown. Expenditures are dollars visitors (same-day visitors and tourists) from a given country of origin spend on travel outside their country of residence. Excludes international transport receipts)

Table 1356. Household Expenditure on Recreation and Culture as a Percentage of GDP: 1970 to 2006

[Household expenditure on recreation and culture includes purchases of audio-visual, photographic, and computer equipment; CDs and DVDs; musical instruments; camper vans; caravans; sports equipment; toys; domestic pets and related products; gardening tools and plants; newspapers; tickets to sporting matches, cinemas and theatres; and spending on gambling (including lottery tickets) less any winnings. It excludes expenditures on restaurants, hotels, and travel and holiday homes but includes package holidays]

Table 1359. External Debt by Country: 1990 to 2006

[In billions of dollars (28.1 represents \$28,100,000,000). Total external debt is debt owed to nonresidents repayable in foreign currency, goods, or services. Total external debt is the sum of public, publicly guaranteed, and private nonguaranteed long-term debt, use of IMF credit, and short-term debt. Short-term debt includes all debt having an original maturity of one year or less and interest in arrears on long-term debt]

NA Not available. ¹ See footnote 2, Table 1288. ² See footnote 3, Table 1288. ³ The debt of the former Soviet Union is included in Russia's data after 1990 on the assumption that 100 percent of all outstanding external debt as of December 1991 has become a liability of Russia. Beginning in 2000, the data for Russia has also been revised to include obligations to members of the former Council for Mutual Economic Assistance and other countries in the form of trade-related credits amounting to \$15.4 billion as of the end of 1996. ⁴ External debt obligations, excluding IBRD, IMF, and short-term, of Bosnia and Herzegovina before 2000 are included under Serbia and Montenegro. Data from 2000 onwards are estimates and also reflect borrowing by the former Yugoslavia that are not yet allocated to the successor republics. ⁵ As of June 2006, Serbia and Montenegro are separate countries (formerly Yugoslavia). Starting 2006, data exclude Montenegro.

Appendix I

Guide to Sources of Statistics, State Statistical Abstracts, and Foreign Statistical Abstracts

Alphabetically arranged, this guide contains references to important primary sources of statistical information for the United States and other countries. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 2000, or types of data not available in regular series, are also included. Data are also available in press releases.

Valuable information may also be found in state reports, foreign statistical abstracts, which are included at the end of this appendix, and in reports for particular commodities, industries, or similar segments of our economic and social structures, many of which are not included here.

Publications listed under each subject are divided into two main groups: "U.S. Government" and "Nongovernment." The location of the publisher of each report is given except for federal agencies located in Washington, DC. Most federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, tel. 202-512-1800, (Web site <<http://bookstore.gpo.gov>>). In some cases, federal publications may be obtained from the issuing agency.

Guide to State Statistical Abstracts

This bibliography includes the most recent statistical abstracts for states published since 2000, plus those that will be issued in late 2008. For some states, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the state as a whole, its component parts, or both. Internet sites also contain statistical data.

Alabama

University of Alabama, Center for Business and Economic Research, Box 870221, Tuscaloosa, AL 35487-0221. 205-348-6191. Fax: 205-348-2951. Internet site <<http://cber.cba.ua.edu/>>.

Alabama Economic Outlook, 2008. Revised annually.

Alaska

Department of Commerce, Community, and Economic Development, Division of Community Advocacy, P.O. Box 110001, Juneau, Alaska 99811-0001. 907-465-3500. Fax 907-465-3532. Internet site <http://www.dced.state.ak.us/dca/misc_resources.htm>.

The Alaska Economic Performance Report, 2006. Online.

Arizona

Economic and Business Research Center, University of Arizona, 1130 East Helen Street, McClelland Hall, Rm. 103, P.O. Box 210108, Tucson, AZ 85721-0108. 520-621-2155. Fax: 520-621-2150. Internet site <<http://www.ebr.eller.arizona.edu/>>.

Arizona Statistical Abstract, 2003.

Arizona's Economy. Quarterly newsletter, 2008.

Arizona Economic Indicators Databook, 2007. Semiannual. Online.

Arkansas

University of Arkansas at Little Rock, Institute for Economic Advancement, Economic Research, 2801 South University Avenue, Little Rock, AR 72204-1099. 501-569-8519. Fax: 501-5698538. Internet site <<http://www.aiea.ualr.edu/default.html>>.

Arkansas State and County Economic Data, 2006.

Arkansas Personal Income Handbook, 2006.

Arkansas Statistical Abstract, 2006. Revised biennially.

California

Department of Finance, 915 L Street, Sacramento, CA 95814. 916-445-3878. Internet site <<http://www.dof.ca.gov/default.asp>>.

California Statistical Abstract, 2007. Annual. Online only.

Colorado

University of Colorado, University Libraries, 184 UCB, 1720 Pleasant St., Boulder, CO 80309-0184. 303-492-8705. Internet site <<http://www.colorado.edu/libraries/govpubs/online.htm>>.

Colorado by the Numbers. Online only.

Colorado Office of Economic Development and International Trade, 1625 Broadway, Suite 2700, Denver, CO 80202. 303-892-3840. Fax: 303-892-3848. Internet site <<http://www.state.co.us/oed/>>.

Colorado Data Book. Online only.

Connecticut

Connecticut Department of Economic & Community Development, 505 Hudson St., Hartford, CT 06106-7106. 860-270-8000. Internet site <<http://www.ct.gov/ecd/site/default.asp>>.

Connecticut Town Profiles, 2008.

Delaware

Delaware Economic Development Office, 99 Kings Highway, Dover, DE 19901-7305. 302-739-4271. Fax: 302-739-5749. Internet site <<http://dedo.delaware.gov>>.

Delaware Statistical Overview, 2008. Online only.

District of Columbia

Business Resource Center, John A. Wilson Building, 1350 Pennsylvania Avenue, NW, Washington, DC 20004. 202-727-1000. Internet site <<http://brc.dc.gov/resources/facts.asp>>.

Market Facts and Statistics. Online only.

Florida

University of Florida, Bureau of Economic and Business Research, P.O. Box 117145, 221 Matherly Hall, Gainesville, FL 32611-7145. 352-392-0171, ext. 219. Internet site <<http://www.bebr.ufl.edu/>>.

Florida Statistical Abstract, 2007.

Annual. Also available on CD-ROM.

Florida County Perspective, 2007. One profile for each county. Annual. Also available on CD-ROM.

Florida County Rankings, 2007. Annual. Also available on CD-ROM.

Georgia

University of Georgia, Selig Center for Economic Growth, Terry College of Business, Athens, GA 30602. 706-542-8100. Internet site <<http://www.selig.uga.edu/>>.

Georgia Statistical Abstract, 2006-07.

Georgia—Con.

University of Georgia, Center for Agribusiness and Economic Development, 301 Lumpkin House, Athens, GA 30602-7509. 706-542-2434. Fax: 706-542-0770. Internet site <<http://www.georgiastats.uga.edu/>>.

The Georgia County Guide, 2008. Annual.

Hawaii

Hawaii State Department of Business, and Economic Development & Tourism, Research and Economic Analysis Division, Statistics and Data Support Branch, P.O. Box 2359, Honolulu, HI 96804. 808-586-2423. Fax: 808-587-2790. Internet site <<http://www.hawaii.gov/dbedt/>>.

The State of Hawaii Data Book 2006. Annual. Periodically updated.

Idaho

Idaho Commerce & Labor, 317 West Main St., Boise, ID 83735. 208-332-3570. Fax: 208-334-6300. Internet site <<http://labor.idaho.gov/dnn/default.aspx?alias=labor.idaho.gov/dnn/idl/>>.

Annual Abstract of Statistics. Annual. 2002. (In English.)

Metropolitan and Micropolitan Statistical Areas: Concepts, Components, and Population

The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to U.S. Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on application of 2000 standards (which appeared in the Federal Register on December 27, 2000) to 2000 decennial census data. Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003, and subsequently updated as of December 2003, November 2004, December 2005, December 2006, and November 2007.

Standard definitions of metropolitan areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation "standard metropolitan area" (SMA). The term was changed to "standard metropolitan statistical area" (SMSA) in 1959 and to "metropolitan statistical area" (MSA) in 1983. The term "metropolitan area" (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The term "core-based statistical area" (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas.

OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, U.S. Department of Commerce. The standards for defining metropolitan areas were modified in 1958, 1971, 1975, 1980, 1990, and 2000.

Defining Metropolitan and Micropolitan Statistical Areas—The 2000 standards provide that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a "central county" (counties). Additional "outlying counties" are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic "building blocks" for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico.

If specified criteria are met, a metropolitan statistical area containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as "metropolitan divisions."

As of November 2007, there are 363 metropolitan statistical areas and 577 micropolitan statistical areas in the United States. In addition, there are eight micropolitan statistical areas and five micropolitan statistical areas in Puerto Rico.

Principal Cities and Metropolitan and Micropolitan Statistical Area Titles—

The largest city in each metropolitan or micropolitan statistical area is designated a "principal city." Additional cities qualify if specified requirements are met concerning population size and employment. The title of each metropolitan or micropolitan statistical area consists of the names of up to three of its principal cities and the

name of each state into which the metropolitan or micropolitan statistical area extends. Titles of metropolitan divisions also typically are based on principal city names, but in certain cases consist of county names.

Defining New England City and Town Areas—In view of the importance of cities and towns in New England, the 2000 standards also provide for a set of geographic areas that are defined using cities and towns in the six New England states. The New England city and town areas (NECTAs) are defined using the same criteria as metropolitan and micropolitan statistical areas and are identified as either metropolitan or micropolitan, based, respectively, on the presence of either an urbanized area of 50,000 or more population or an urban cluster of at least 10,000 but less than 50,000 population. If the specified criteria are met, a NECTA containing a single core with a population of at least 2.5 million may be subdivided to form smaller groupings of cities and towns referred to as New England city and town area divisions.

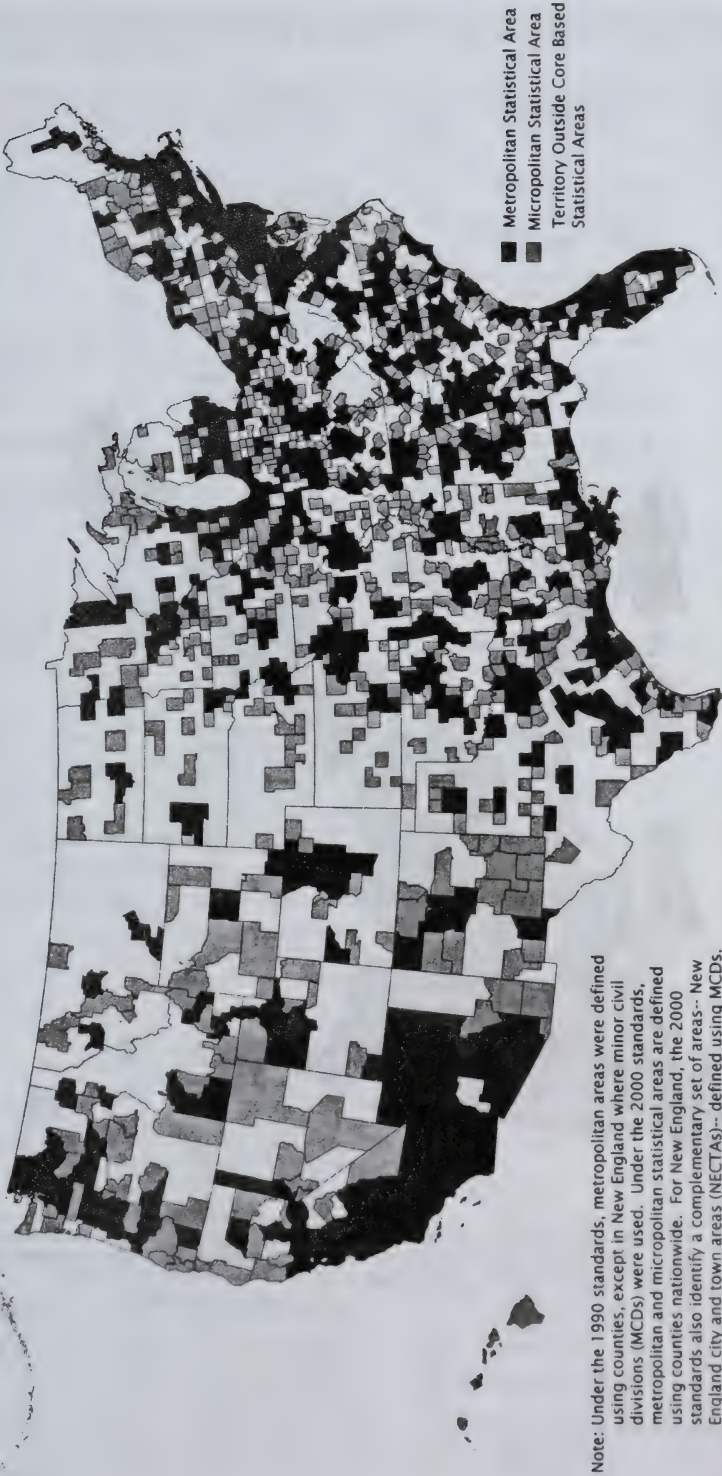

Changes in Definitions Over Time—Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of (1) the recognition of new areas as they reached the minimum required city or urbanized area population and (2) the addition of counties (or cities and towns in New England) to existing areas as new decennial census data showed them to qualify.

In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data. However, Census Bureau data serve as the basis for intercensal updates in specified circumstances.

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For some purposes, comparisons of data for areas as defined at given dates may be appropriate; for other purposes, it may be preferable to maintain consistent area definitions. Historical metropolitan area definitions are available for 1999, 1993, 1990, 1983, 1981, 1973, 1970, 1963, 1960, and 1950.

Excluding Tables 19 through 23 in the Population section; Table 574 in the Labor Force section; Table 661 in the Income section, and the tables that follow in this appendix, the tables presenting data for metropolitan areas in this edition of the *Statistical Abstract* are based on the 1999 or earlier metropolitan area definitions. For a list of component counties according to the 1999 definition, see Appendix II in the 2002 edition of the *Statistical Abstract* or <<http://www.census.gov/population/www/estimates/pastmetro.html>>.

Figure A1
Metropolitan and Micropolitan Statistical Areas of the United States
 As defined by the U.S. Office of Management and Budget, December 2006

Note: Under the 1990 standards, metropolitan areas were defined using counties, except in New England where minor civil divisions (MCDs) were used. Under the 2000 standards, metropolitan and micropolitan statistical areas are defined using counties nationwide. For New England, the 2000 standards also identify a complementary set of areas-- New England city and town areas (NECTAs)-- defined using MCDs.

Figure A2

Metropolitan and Micropolitan New England City and Town Areas (NECTAs)

As defined by the U.S. Office of Management and Budget, December 2006

Note: Under the 2000 standards, metropolitan and micropolitan statistical areas are defined using counties nationwide. For New England, the 2000 standards also identify a complementary set of areas-- New England city and town areas (NECTAs) -- defined using MCDs.

**Table A. Metropolitan Statistical Areas and Components—
Population: 2007**

[Population as of July 2007. (159 represents 159,000.) Metropolitan statistical areas as defined by the U.S. Office of Management and Budget as of December 2006. All geographic boundaries for 2007 population estimates are defined as of January 1, 2007. All metropolitan areas are arranged alphabetically]

Appendix III

Limitations of the Data

Introduction—The data presented in this *Statistical Abstract* came from many sources. The sources include not only federal statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health associations, and private organizations such as the National Education Association and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms and, for ongoing series, the number and frequency of time periods for which data are available.

The statistics presented were obtained and tabulated by various means. Some statistics are based on complete enumerations or censuses while others are based on samples. Some information is extracted from records kept for administrative or regulatory purposes (school enrollment, hospital records, securities registration, financial accounts, social security records, income tax returns, etc.), while other information is obtained explicitly for statistical purposes through interviews or by mail. The estimation procedures used vary from highly sophisticated scientific techniques, to crude “informed guesses.”

Each set of data relates to a group of individuals or units of interest referred to as the *target universe* or *target population*, or simply as the *universe* or *population*. Prior to data collection the target universe should be clearly defined. For example, if data are to be collected for the universe of households in the United States, it is necessary to define a “household.” The target universe may not be completely tractable. Cost and other considerations may restrict data collection to a *survey universe* based on some available list, such list may be inaccurate or out of date. This list is called a *survey frame* or *sampling frame*.

The data in many tables are based on data obtained for all population units, a *census*, or on data obtained for only a portion, or *sample*, of the population units. When the data presented are based on a sample, the sample is usually a scientifically selected *probability sample*. This is a sample selected from a list or sampling frame in such a way that every possible sample has a known chance of selection and usually each unit selected can be assigned a number, greater than zero and less than or equal to one, representing its likelihood or probability of selection.

For large-scale sample surveys, the probability sample of units is often selected as a multistage sample. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as primary sampling units (PSUs). For example, in a national multistage household sample, PSUs are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as secondary sampling units. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single stage) sample, a list of the sampling units or sampling frame for that stage must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSUs must be obtained. For the final stage of selection, lists of households, and sometimes persons within the households, have to be compiled in the field. For surveys of economic entities and for

the economic censuses the Bureau generally uses a frame constructed from the Bureau's Business Register. The Business Register contains all establishments with payroll in the United States including small single establishment firms as well as large multi-establishment firms.

Wherever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as *sample estimates*. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. Estimates based on a sample will, however, generally differ from the hypothetical census figures. Two classifications of errors are associated with estimates based on sample surveys: (1) *sampling error*—the error arising from the use of a sample, rather than a census, to estimate population quantities and (2) *nonsampling error*—those errors arising from nonsampling sources. As discussed below, the magnitude of the sampling error for an estimate can usually be estimated from the sample data. However, the magnitude of the nonsampling error for an estimate can rarely be estimated. Consequently, actual error in an estimate exceeds the error that can be estimated.

The particular sample used in a survey is only one of a large number of possible samples of the same size which could have been selected using the same sampling procedure. Estimates derived from the different samples would, in general, differ from each other. The *standard error* (SE) is a measure of the variation among the estimates derived from all possible samples. The standard error is the most commonly used measure of the sampling error of an estimate. Valid estimates of the standard errors of survey estimates can usually be calculated from the data collected in a probability sample. For convenience, the standard error is sometimes expressed as a percent of the estimate and is called the *relative standard error* or *coefficient of variation* (CV). For example, an estimate of 200 units with an estimated standard error of 10 units has an estimated CV of 5 percent.

A sample estimate and an estimate of its standard error or CV can be used to construct interval estimates that have a prescribed confidence that the interval includes the average of the estimates derived from all possible samples with a known probability. To illustrate, if all possible samples were selected under essentially the same general conditions, and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then: 1) approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average estimate derived from all possible samples; 2) approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average estimate derived from all possible samples; and 3) approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average estimate derived from all possible samples.

Thus, for a particular sample, one can say with the appropriate level of confidence (e.g., 90 percent or 95 percent) that the average of all possible samples is included in the constructed interval. Example of a confidence interval: An estimate is 200 units with a standard error of 10 units. An approximately 90 percent confidence interval (plus or minus 1.6 standard errors) is from 184 to 216.

All surveys and censuses are subject to nonsampling errors. Nonsampling errors are of two kinds—*random* and *nonrandom*. Random nonsampling errors arise because of the varying interpretation of questions (by respondents or interviewers) and varying actions of coders, keyers, and other processors. Some randomness is also introduced when respondents must estimate. Nonrandom nonsampling errors result from total nonresponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide correct information, difficulty interpreting questions, mistakes

in recording or keying data, errors of collection or processing, and coverage problems (overcoverage and undercoverage of the target universe). Random nonresponse errors usually, but not always, result in an understatement of sampling errors and thus an overstatement of the precision of survey estimates. Estimating the magnitude of nonsampling errors would require special experiments or access to independent data and, consequently, the magnitudes are seldom available.

Nearly all types of nonsampling errors that affect surveys also occur in complete censuses. Since surveys can be conducted on a smaller scale than censuses, nonsampling errors can presumably be controlled more tightly. Relatively more funds and effort can perhaps be expended toward eliciting responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can sometimes be more accurate than census results.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. Adjustments made for either type of nonresponse are often referred to as *imputations*. Imputation for total nonresponse is usually made by substituting for the questionnaire responses of the nonrespondents the "average" questionnaire responses of the respondents. These imputations usually are made separately within various groups of sample members, formed by attempting to place respondents and nonrespondents together that have "similar" design or ancillary characteristics. Imputation for item nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are "similar" to those of the nonrespondent.

For an estimate calculated from a sample survey, the *total error* in the estimate is composed of the sampling error, which can usually be estimated from the sample, and the nonsampling error, which usually cannot be estimated from the

sample. The total error present in a population quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the *Statistical Abstract* tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available. To obtain estimates of the estimated standard errors from the sample of interest, obtain a copy of the referenced report which appears at the end of each table.

Source of Additional Material: The Federal Committee on Statistical Methodology (FCSM) is an interagency committee dedicated to improving the quality of federal statistics <<http://fcsm.ssd.census.gov>>.

Principal data bases—Beginning below are brief descriptions of 35 of the sample surveys and censuses that provide a substantial portion of the data contained in this *Abstract*.

U.S. DEPARTMENT OF AGRICULTURE, National Agriculture Statistics Service

Basic Area Frame Sample

Universe, Frequency, and Types of Data:

June agricultural survey collects data on planted acreage and livestock inventories on all land in the 48 contiguous states and Hawaii. The survey also serves to measure list incompleteness and is subsampled for multiple frame surveys.

Type of Data Collection Operation: Stratified probability sample of about 11,000 land area units of about 1 sq. mile (range from 0.1 sq. mile in cities to several sq. miles in open grazing areas). Sample includes 42,000 parcels of agricultural land. About 20 percent of the sample replaced annually.

Data Collection and Imputation Procedures: Data collection is by personal enumeration. Imputation is based on enumerator observation or data reported by respondents having similar agricultural characteristics.

Estimates of Sampling Error: Estimated CVs range from 1 percent to 2 percent for regional estimates to 3 percent to

6 percent for state estimates of major crop acres and livestock inventories.

Other (nonsampling) Errors: Minimized through rigid quality controls on the collection process and careful review of all reported data.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: *The Fact Finders of Agriculture*, March 2007.

Multiple Frame Surveys

Universe, Frequency, and Types of Data: Surveys of U.S. farm operators to obtain data on major livestock inventories, selected crop acreage and production, grain stocks, and farm labor characteristics, farm economic data, and chemical use data. Estimates are made quarterly, semi-annually, or annually depending on the data series.

Type of Data Collection Operation: Primary frame is obtained from general or special purpose lists, supplemented by a probability sample of land areas used to estimate for list incompleteness.

Data Collection and Imputation Procedures: Mail, telephone, or personal interviews used for initial data collection. Mail nonrespondent follow-up by phone and personal interviews. Imputation based on average of respondents.

Estimates of Sampling Error: Estimated CVs range from 1 percent to 2 percent at the U.S. level for crop and livestock data series and 3 to 5 percent for economic data. Regional CVs range from 3 to 6 percent, while state estimate CVs run 5 to 10 percent.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: *The Fact Finders of Agriculture*, March 2007.

Objective Yield Surveys

Universe, Frequency, and Types of Data: Monthly surveys during the growing season of corn, cotton, potatoes, soybeans, and wheat fields in top producing states for forecasting and estimating yield per acre.

Type of Data Collection Operation: Random location of plots in probability sample. Corn, cotton, soybeans, spring wheat, and durum wheat selected in June from Basic Area Frame Sample (see above). Winter wheat and potatoes selected from March and June multiple frame surveys, respectively.

Data Collection and Imputation Procedures: Enumerators count and measure plant characteristics in sample fields. Production measured from plots at harvest. Harvest loss measured from post harvest gleanings.

Estimates of Sampling Error: CVs for national estimates of production are about 2 to 3 percent.

Other (nonsampling) Errors: In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

Sources of Additional Material: U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: *The Fact Finders of Agriculture*, March 2007.

U.S. BUREAU OF JUSTICE STATISTICS (BJS)

National Crime Victimization Survey

Universe, Frequency, and Types of Data: Monthly survey of individuals and households in the United States to obtain data on criminal victimization of those units for compilation of annual estimates.

Type of Data Collection Operation: National probability sample survey of about 42,000 interviewed households in 203 PSUs selected from a list of addresses from the 1990 census, supplemented by new construction permits and an area sample where permits are not required.

Data Collection and Imputation Procedures: Interviews are conducted every 6 months for 3 years for each household in the sample; 7,000 households are interviewed monthly. Personal interviews are used in the first interview; the intervening interviews are conducted by telephone whenever possible.

Estimates of Sampling Error: CVs for 2005 estimates are: 4.1 percent for personal crimes (includes all crimes of violence plus purse snatching crimes), 4.2 percent for crimes of violence; 16.2 percent for estimate of rape/sexual assault counts; 9.7 percent for robbery counts; 4.4 percent for assault counts; 15.1 percent for purse snatching/pocket picking; 2.2 percent for property crimes; 4.2 percent for burglary counts; 2.5 percent for theft (of property); and 6.6 percent for motor vehicle theft counts.

Other (nonsampling) Errors: Respondent recall errors which may include reporting incidents for other than the reference period; interviewer coding and processing errors; and possible mistaken reporting or classifying of events. Adjustment is made for a household noninterview rate of about 9 percent and for a within-household noninterview rate of 16 percent.

Sources of Additional Material: U.S. Bureau of Justice Statistics, *Criminal Victimization in the United States*, annual.

U.S. Bureau of Labor Statistics

Consumer Expenditure Survey (CE)

Universe, Frequency and Types of Data: Consists of two continuous components: a quarterly interview survey and a weekly diary or recordkeeping survey. They are nationwide surveys that collect data on consumer expenditures, income, characteristics, and assets and liabilities. Samples are national probability samples of households that are representative of the civilian noninstitutional population. The surveys have been ongoing since 1980.

Type of Data Collection Operation: The Interview Survey is a panel rotation survey. Each panel is interviewed for five quarters and then dropped from the survey. About 7,000 consumer units are

interviewed each quarter. The Diary Survey sample is new each year and consists of about 7,000 consumer units. Data are collected on an ongoing basis in 91 areas of the country.

Data Collection and Imputation Procedures: For the Interview Survey, data are collected by personal interview with each consumer unit interviewed once per quarter for five consecutive quarters. Designed to collect information that respondents can recall for 3 months or longer, such as large or recurring expenditures. For the Diary Survey, respondents record all their expenditures in a self-reporting diary for two consecutive one-week periods. Designed to pick up items difficult to recall over a long period, such as detailed food expenditures. Missing or invalid attributes, expenditures, or incomes are imputed. Assets and liabilities are not imputed. The U.S. Census Bureau collects the data for the Bureau of Labor Statistics.

Estimates of Sampling Error: Standard error tables are available since 2000.

Other (nonsampling) Errors: Includes incorrect information given by respondents, data processing errors, interviewer errors, and so on. They occur regardless of whether data are collected from a sample or from the entire population.

Sources of Additional Material: Bureau of Labor Statistics, see Internet site <<http://www.bls.gov/cex>>.

Consumer Price Index (CPI)

Universe, Frequency, and Types of Data: A monthly survey of price changes of all types of consumer goods and services purchased by urban wage earners and clerical workers prior to 1978, and urban consumers thereafter. Both indexes continue to be published.

Type of Data Collection Operation: Prior to 1978, and since 1998, sample of various consumer items in 87 urban areas; from 1978–1997, in 85 PSUs, except from January 1987 through March 1988, when 91 areas were sampled.

Data Collection and Imputation Procedures: Prices of consumer items are obtained each month from about 25,500 retail outlets and from about 4,000

housing units in 87 areas. Prices of food, fuel, and a few other items are obtained monthly; prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in others.

Estimates of Sampling Error: Estimates of standard errors are available.

Other (nonsampling) Errors: Errors result from inaccurate reporting, difficulties in defining concepts and their operational implementation, and introduction of product quality changes and new products.

Sources of Additional Material: U.S.

Bureau of Labor Statistics, Internet site <<http://www.bls.gov/cpi/home.htm>> and *BLS Handbook of Methods*, Chapter 17, see Internet site <<http://www.bls.gov/opub/hom/pdf/homch17.pdf>>.

Current Employment Statistics (CES) Program

Universe, Frequency, and Types of Data:

Monthly survey drawn from a sampling frame of over 8 million unemployment insurance tax accounts in order to obtain data by industry on employment, hours, and earnings.

Type of Data Collection Operation: In 2006, the CES sample included about 160,000 businesses and government agencies, which represent approximately 400,000 individual worksites.

Data Collection and Imputation Procedures: Each month, the state agencies cooperating with BLS, as well as BLS Data Collection Centers, collect data through various automated collection modes and mail. BLS Washington staff prepares national estimates of employment, hours, and earnings while states use the data to develop state and area estimates.

Estimates of Sampling Errors: The relative standard error for total nonfarm employment is 0.1 percent. From April 2002 to March 2003, the cumulative net birth/death model added 469,000.

Other (nonsampling) Errors: Estimates of employment adjusted annually to reflect complete universe. Average adjustment is 0.2 percent over the last decade, with an absolute range from less than 0.05 percent to 0.6 percent.

Sources of Additional Material: U.S.

Bureau of Labor Statistics, Employment and Earnings, monthly, Explanatory Notes and Estimates of Errors, Tables 2-A through 2-F. See <<http://www.bls.gov/web/cesntab.htm>>.

National Compensation Survey (NCS)

Universe, Frequency, and Types of Data:

NCS collects data from establishments of all employment-size classes in private industries as well as state and local governments. The survey stratifies its data by geographic area and industry. NCS collects data on work schedules, wages, salaries, and employer costs for employee benefits. For approximately 80 metropolitan areas and the nation, NCS produces information on workers' earnings and benefits in a variety of occupations at different work levels. NCS is also responsible for two quarterly releases: the Employment Cost Index (ECI), which measures percent changes in the cost of employment, and the Employer Costs for Employee Compensation (ECEC), which measures costs per hour worked for individual benefits. The survey provides data by industry sector, industry division, occupational group, bargaining status, metropolitan area status, census region, and census division. ECEC also provides data by establishment-size class.

Type of Data Collection Operation: Establishments are selected for the survey based on a probability-proportionate-to-employment technique. NCS replaces its sample on a continual basis. Private industry establishments are in the survey for approximately 5 years.

Data Collection and Imputation Procedures: A personal visit to the establishment is the initial source for collecting data. Communication via mail, fax, and telephone provide quarterly updates. Imputation is done for individual benefits.

Estimates of Sampling Error: NCS uses standard errors to evaluate published series. These standard errors are available at <<http://www.bls.gov/ncs/ect/home.htm>>.

Other (nonsampling) Errors: Nonsampling errors have a number of potential sources. The primary sources are

(1) survey nonresponse and (2) data collection and processing errors. Nonsampling errors are not measured. The use of quality assurance programs reduces the potential for nonsampling errors. These programs include the use of reinterviews, interview observations, and the systematic professional review of reports. The programs also serve as a training device that provides feedback on errors for field economists (or data collectors). Quality assurance programs also provide information on sources of error. This information is used to improve procedures that result in fewer errors. NCS also conducts extensive training of field economists to maintain high standards in data collection.

Sources of Additional Material: Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 8 <<http://www.bls.gov/opub/hom/pdf/homch8.pdf>>.

Producer Price Index (PPI)

Universe, Frequency, and Types of Data: Monthly survey of producing companies to determine price changes of all commodities and services produced in the United States for sale in commercial transactions. Data on agriculture, forestry, fishing, manufacturing, mining, gas, electricity, construction, public utilities, wholesale trade, retail trade, transportation, healthcare, and other services.

Type of Data Collection Operation: Probability sample of approximately 30,000 establishments that result in about 100,000 price quotations per month.

Data Collection and Imputation Procedures: Data are collected by mail and facsimile. Missing prices are estimated by those received for similar products or services. Some prices are obtained from trade publications, organized exchanges, and government agencies. To calculate index, price changes are multiplied by their relative weights taken from the Census Bureau's 2002 shipment values from their Census of Industries.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: Not available at present.

Sources of Additional Material: U.S. Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 14, Bulletin 2490. U.S. Bureau of Labor Statistics Internet site <<http://stats.bls.gov/ppi/>>.

BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

Survey of Consumer Finances

Universe, Frequency, and Types of Data:

Periodic sample survey of families. In this survey a given household is divided into a primary economic unit and other economic units. The primary economic unit, which may be a single individual, is generally chosen as the person or couple who either holds the title to the home or is listed on the lease, along with all other people in the household who are financially dependent on that person or couple. The primary economic unit is used as the reference family. The survey collects detailed data on the composition of family balance sheets, the terms of loans, and relationships with financial institutions. It also gathers information on the employment history and pension rights of the survey respondent and the spouse or partner of the respondent.

Type of Data Collection Operation: The survey employs a two-part strategy for sampling families. Some families are selected by standard multistage area probability sampling methods applied to all 50 states. The remaining families in the survey are selected using statistical records derived from tax returns, under the strict rules governing confidentiality and the rights of potential respondents to refuse participation.

Data Collection and Imputation Procedures: National Opinion Research Center (NORC) at the University of Chicago has collected data for the survey since 1992. Since 1995, the survey has used computer-assisted personal interviewing. Adjustments for nonresponse are made through multiple imputation of unanswered questions and through weighting adjustments based on data used in the sample design for families that refused participation.

Estimates of Sampling Error: Because of the complex design of the survey, the estimation of potential sampling errors is not straightforward. A replicate-based procedure is available.

Other (nonsampling) Errors: The survey aims to complete 4,500 interviews, with about two thirds of that number deriving from the area-probability sample. The response rate is typically about 70 percent for the area-probability sample and about 35 percent over all strata in the tax-data sample. Proper training and monitoring of interviewers, careful design of questionnaires, and systematic editing of the resulting data were used to control inaccurate survey responses.

Sources of Additional Material: Board of Governors of the Federal Reserve System, "Recent Changes in U.S. Family Finances: Evidence from the 2001 and 2004 Survey of Consumer Finances," *Federal Reserve Bulletin*, 2006, <<http://www.federalreserve.gov/Pubs/Bulletin>>.

U.S. CENSUS BUREAU

2002 Economic Census (Industry Series, Geographic Area Series and Subject Series Reports) (for NAICS sectors 22, 42, 44–45, 48–49, and 51–81).

Universe, Frequency, and Types of Data: Conducted every 5 years to obtain data on number of establishments, number of employees, total payroll size, total sales/receipts/revenue, and other industry-specific statistics. In 2002, the universe was all employer and nonemployer establishments excluding agriculture, forestry, fishing and hunting, and government.

Type of Data Collection Operation: All large employer firms were surveyed (i.e., all employer firms above payroll-size cutoffs established to separate large from small employers) plus a 5 percent to 25 percent sample of the small employer firms. Firms with no employees were not sent a census return.

Data Collection and Imputation Procedures: Mail questionnaires were used with both mail and telephone follow-ups for nonrespondents. Businesses also had the option to respond electronically. Data for nonrespondents and for small employer firms not mailed a questionnaire were obtained from administrative

records of other federal agencies or imputed. Nonemployer data were obtained exclusively from IRS 2002 income tax returns.

Estimates of Sampling Error: Not applicable for basic data such as sales, revenue, receipts, payroll, etc. Other (nonsampling) errors: establishment response rates by NAICS sector in 2002 ranged from 80 percent to 89 percent. Item response rates generally ranged from 50 percent to 90 percent with lower rates for the more detailed questions. Nonsampling errors may occur during the collection, reporting, and keying of data, and due to industry misclassification.

Sources of Additional Material: U.S. Census Bureau, *2002 Economic Census: Industry Series, Geographic Area Series and Subject Series Reports* (by NAICS sector), Appendix C and <<http://www.census.gov/econ/census02/guide/index.html>>.

American Community Survey (ACS)

Universe, Frequency, and Types of Data: Nationwide survey to obtain data about demographic, social, economic, and housing characteristics of people, households, and housing units. Covers the household population and, for the first time in 2006, also includes the population living in institutions, college dormitories, and other group quarters.

Type of Data Collection Operation: First-phase sampling is performed during both Main and Supplemental sampling for approximately 3,000,000 housing units in the U.S. and 36,000 in Puerto Rico (PR). First stage sampling defines the universe for the second stage of sampling through two steps. First, all addresses that were in a first-stage sample within the past four years are excluded from eligibility. This ensures that no address is in sample more than once in any 5-year period. The second step is to select a 20 percent systematic sample of "new" units, i.e. those units that have never appeared on a previous Master Address File (MAF) extract. Each new address is systematically assigned to either the current year or to one of four back-samples. This procedure maintains five equal partitions of the

universe. Sampling is performed separately on small (15 persons or fewer) and large (more than 15 persons) group quarters, but the target rate for both is a 2.5% sample of the group quarters population. Approximately 200,000 group quarters were selected in the U.S., and an additional 1,000 in Puerto Rico.

Data Collection and Imputation Procedures: The American Community Survey is conducted every month on independent samples. Each housing unit in the independent monthly samples is mailed a prenotice letter announcing the selection of the address to participate, a survey questionnaire package, and a reminder postcard. These sample units receive a second (replacement) questionnaire package if the initial questionnaire has not been returned by a scheduled date. In the mail-out/mail-back sites, sample units for which a questionnaire is not returned in the mail and for which a telephone number is available are defined as the telephone nonresponse follow-up universe. Interviewers attempt to contact and interview these mail nonresponse cases. Sample units from all sites that are still unresponsive two months after the mailing of the survey questionnaires and directly after the completion of the telephone follow-up operation are subsampled at rates between 1 in 2 and 1 in 3. The selected nonresponse units are assigned to Field Representatives (FRs), who visit the units, verify their existence or declare them nonexistent, determine their occupancy status, and conduct interviews. Collection of group quarters data is conducted by field representatives. Their methods include completing the questionnaire while speaking to the resident in person or over the telephone, conducting a personal interview with a proxy, such as a relative or guardian, or leaving paper questionnaires for residents to complete for themselves and then pick them up later. This last option is used for data collection in federal prisons. After data collection is completed, any remaining incomplete or inconsistent information was imputed during the final automated edit of the collected data.

Estimates of Sampling Error: The data in the ACS products are estimates of the

actual figures that would have been obtained by interviewing the entire population using the same methodology. The estimates from the chosen sample also differ from other samples of housing units and persons within those housing units.

Other (nonsampling) Errors: Nonsampling Error—In addition to sampling error, data users should realize that other types of errors may be introduced during any of the various complex operations used to collect and process survey data. An important goal of the ACS is to minimize the amount of nonsampling error introduced through nonresponse for sample housing units. One way of accomplishing this is by following up on mail nonrespondents.

Sources of Additional Material: U.S. Census Bureau, American Community Survey Web site available on Internet, <<http://www.census.gov/acs/www/index.html>> U.S. Census Bureau, American Community Survey Accuracy of the Data documents available on the Internet, <<http://www.census.gov/acs/www/UseData/Accuracy/Accuracy1.htm>>.

American Housing Survey

Universe, Frequency, and Types of Data: Conducted nationally in odd numbered years to obtain data on the approximately 124 million occupied or vacant housing units in the United States (group quarters are excluded). Data include characteristics of occupied housing units, vacant units, new housing and mobile home units, financial characteristics, recent mover households, housing and neighborhood quality indicators, and energy characteristics.

Type of Data Collection Operation: The national sample was a multistage probability sample with about 57,000 units eligible for interview in 2005. Sample units, selected within 394 PSUs, were surveyed over a 4-month period.

Data Collection and Imputation Procedures: For 2005, the survey was conducted by personal interviews. The interviewers obtained the information from the occupants or, if the unit was vacant, from informed persons such as landlords, rental agents, or knowledgeable neighbors.

Estimates of Sampling Error: For the national sample, illustrations of the Standard Error (SE) of the estimates are provided in the Appendix D of the 2005 report.

Other (nonsampling) Errors: Response rate was about 90 percent. Nonsampling errors may result from incorrect or incomplete responses, errors in coding and recording, and processing errors. Appendix D of the 2005 report has a complete discussion of the errors.

Sources of Additional Material: U.S. Census Bureau, *Current Housing Reports*, Series H-150 and H-170, *American Housing Survey* see <<http://www.census.gov/hhes/www/ahs.html>>.

Annual Survey of Government Employment and Payroll

Universe, Frequency, and Types of Data:

The survey measures the number of state, local, and federal civilian government employees and their gross payrolls for the pay period including March 12, 2006. The survey is conducted annually except in years ending in '2' and '7' when a census of all state and local governments is done. The survey provides data on full-time and part-time employment, part-time hours worked, full-time equivalent employment, and payroll statistics by governmental function (elementary and secondary education, higher education, police protection, fire protection, financial administration, central staff services, judicial and legal, highways, public welfare, solid waste management, sewerage, parks and recreation, health, hospitals, water supply, electric power, gas supply, transit, natural resources, correction, libraries, air transportation, water transport and terminals, other education, state liquor stores, social insurance administration, and housing and community development).

Type of Data Collection Operations: The survey sample is taken from the 2002 Census of Governments and contains approximately 11,000 local government units. These units were sampled from a sampling frame that contained 83,767 local governments (county, city, township, special district, school districts) in addition to 50 state governments and the District of Columbia. This frame was

slightly different from the Annual Finance Survey sampling frame. Forty-two of the state governments provided data from central payroll records for all or most of their agencies/institutions. Data for agencies and institutions for the remaining state governments were obtained by mail canvass questionnaires. Local governments were also canvassed using a mail questionnaire. However, elementary and secondary school system data in Florida, North Dakota, and Washington were supplied by special arrangements with the state education agency in each of these states. All respondents receiving the mail questionnaire had the option of responding using the employment Web site developed for reporting data. Approximately 25% of the state agency and local government respondents chose to respond on the Web.

Editing and Imputation Procedures: Editing: Editing is a process that ensures survey data are accurate, complete, and consistent. Efforts are made at all phases of collection, processing, and tabulation to minimize errors. Although some edits are built into the Internet data collection instrument and the data entry programs, the majority of the edits are performed after the case has been loaded into the Census Bureau's database. Edits consist primarily of two types: consistency and a ratio of the current year's reported value to the prior year's value. The consistency edits check the logical relationships of data items reported on the form. For example, if a value exists for employees for a function then a value must exist for payroll also. If part-time employees and payroll are reported then part-time hours must be reported and vice versa. The current year/prior year edits compare data for the number of employees, the function reported for the employees, and the average salary between reporting years. If data falls out of acceptable tolerance levels, the item is flagged for review. Some additional checks are made comparing data from the Annual Finance Survey to data reported on the Annual Survey of Government Employment and Payroll to verify that employees reported on the Annual Survey of Government Employment and Payroll at

a particular function have a corresponding expenditure on the Finance Survey. For both types of edits, the edit results are reviewed by analysts and adjusted when needed. When the analyst is unable to resolve or accept the edit failure, contact is made with the respondent to verify or correct the reported data.

Imputation: Not all respondents answer every item on the questionnaire. There are also questionnaires that are not returned despite efforts to gain a response. Imputation is the process of filling in missing or invalid data with reasonable values in order to have a complete data set. For general purpose governments and for schools, the imputations were based on recent historical data from either a prior year annual survey or the most recent Census of Governments, if it was available. These data were adjusted by a growth rate that was determined by the growth of units that were similar (in size, geography, and type of government) to the nonrespondent. If there was no recent historical data available, the imputations were based on the data from a randomly selected donor that was similar to the nonrespondent. This donor's data was adjusted by dividing each data item by the population (or enrollment) of the donor and multiplying the result by the nonrespondent's population (or enrollment). For special districts, if prior year data are available, the data are brought forward with a national level growth rate applied. Otherwise, the data are imputed to be zero. In cases where good secondary data sources exist, the data from those sources were used.

Estimates of Sampling Error: Estimated relative standard errors for all variables are given in tabulations on the Web site. For U.S. and state-and-local government-level estimates of total full-time equivalents and total payroll, most relative standard errors are generally less than one percent, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: Although every effort is made in all phases of collection, processing, and tabulation to minimize errors, the sample data are subject to nonsampling errors such as inability to obtain data for every variable

from all units in the sample, inaccuracies in classification, response errors, misinterpretation of questions, mistakes in keying and coding, and coverage errors. These same errors may be evident in census collections and may affect the Census of Governments data used to adjust the sample during the estimation phase and used in the imputation process.

Sources of Additional Material:

<<http://www.census.gov/govs/www/apes.html>> and <<http://www.census.gov/govs/www/apesstl06.html>>.

Annual Survey of Government Finances

Universe, Frequency, and Types of Data:

The United States Census Bureau conducts an Annual Survey of Government Finances, as authorized by law under Title 13, United States Code, Section 182. Alternatively, every five years, in years ending in a '2' or '7,' a Census of Governments, including a Finance portion, is conducted under Title 13, Section 161. The survey coverage includes all state and local governments in the United States. For both the Census and annual survey, the finance detail data is equivalent, encompassing the entire range of government finance activities—revenue, expenditure, debt, and assets.

Type of Data Collection Operations: The data collection phase for the annual survey made use of three methods to obtain data: mail canvass, internet collection, and central collection from state sources. In 28 states, all or part of the general purpose finance data for local governments was obtained from cooperative arrangements between the Census Bureau and a state government agency. These usually involved a data collection effort carried out to meet the needs of both agencies—the state agency for purposes of audit, oversight, or information, and the Census Bureau for statistical purposes. Data for the balance of local governments in this annual survey were obtained via mail questionnaires sent directly to county, municipal, township, special district, and school district governments. School district data were collected via cooperative arrangements with state education

agency data for state governments were compiled by analysts of the Census Bureau, usually with the cooperation and assistance of state officials. The data were compiled from state government audits, budgets, and other financial reports, either in printed or electronic format. The compilation generally involved recasting the state financial records into the classification categories used for reporting by the Census Bureau.

Data Collection and Imputation Procedures: Survey is conducted by mail with mail follow-ups of nonrespondents. Imputation for all nonresponse items is based on previous year reports or, for new governments, on data from similar donors.

Estimates of Sampling Error: The local government statistics in this survey are developed from a sample survey. Therefore, the local totals, as well as aggregates of state and local government data, are considered estimated amounts subject to sampling error. State government finance data are not subject to sampling. Consequently, state-local aggregates shown here are more reliable (on a relative standard error basis) than the local government estimates they include. Estimates of major United States totals for local governments are subject to a computed sampling variability of less than one-half of 1 percent. State and local government totals are generally subject to sampling variability of less than 3 percent.

Other (nonsampling) Errors: The estimates are also subject to the inaccuracies in classification, response, and processing. Efforts were made at all phases of collection, processing, and tabulation to minimize errors. However, the data are still subject to errors from estimating for missing data, errors from misreported data, errors from miscoding, and difficulties in identifying every unit that should be included in the report. Every effort was made to keep such errors to a minimum through care in examining, editing, and tabulating the data reported by government officials.

<<http://www.census.gov/govs/www/financegen.html>> and <[.\[census.gov/govs/www/05censustechdoc.html\]\(http://www.census.gov/govs/www/05censustechdoc.html\)>.](http://www</p></div><div data-bbox=)

Annual Survey of Manufactures (ASM)

Universe, Frequency, and Types of Data:

The Annual Survey of Manufactures is conducted annually, except for years ending in '2' and '7' for all manufacturing establishments having one or more paid employees. The purpose of the ASM is to provide key intercensal measures of manufacturing activity, products, and location for the public and private sectors. The ASM provides statistics on employment, payroll, worker hours, payroll supplements, cost of materials, value added by manufacturing, capital expenditures, inventories, and energy consumption. It also provides estimates of value of shipments for 1,800 classes of manufactured products.

Type of Data Collection Operation: The ASM includes approximately 50,000 establishments selected from the census universe of 346,000 manufacturing establishments. Approximately 24,000 large establishments are selected with certainty, and the remaining 26,000 other establishments are selected with probability proportional to a composite measure of establishment size. The survey is updated from two sources: Internal Revenue Service administrative records are used to include new single-unit manufacturers and the Company Organization Survey identifies new establishments of multiunit forms.

Data Collection and Imputation Procedures: Survey is conducted by mail with phone and mail follow-ups of nonrespondents. Imputation (for all nonresponse items) is based on previous year reports, or for new establishments in survey, on industry averages.

Estimates of Sampling Error: Estimated relative standard errors for number of employees, new expenditures, and for value added totals are given in annual publications. For U.S. level industry statistics, most estimated relative standard errors are 2 percent or less, but vary considerably for detailed characteristics.

Other (nonsampling) Errors: The unit response rate is about 85 percent. Nonsampling errors include those due to

collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.

Sources of Additional Material: U.S. Census Bureau, *Annual Survey of Manufactures*, and Technical Paper 24.

Census of Population

Universe, Frequency, and Types of Data: Complete count of U.S. population conducted every 10 years since 1790. Data obtained on number and characteristics of people in the U.S.

Type of Data Collection Operation: In the 1990, and 2000 censuses the 100 percent items included: age, date of birth, sex, race, Hispanic origin, and relationship to householder. In 1980, approximately 19 percent of the housing units were included in the sample; in 1990 and 2000, approximately 17 percent.

Data Collection and Imputation Procedures: In 1980, 1990, and 2000, mail questionnaires were used extensively with personal interviews in the remainder. Extensive telephone and personal follow-up for nonrespondents was done in the censuses. Imputations were made for missing characteristics.

Estimates of Sampling Error: Sampling errors for data are estimated for all items collected by sample and vary by characteristic and geographic area. The coefficients of variation (CVs) for national and state estimates are generally very small.

Other (nonsampling) Errors: Since 1950, evaluation programs have been conducted to provide information on the magnitude of some sources of nonsampling errors such as response bias and undercoverage in each census. Results from the evaluation program for the 1990 census indicated that the estimated net undercoverage amounted to about 1.5 percent of the total resident population. For Census 2000, the evaluation program indicated a net overcount of 0.5 percent of the resident population.

Sources of Additional Material: U.S. Census Bureau, *The Coverage of Population in the 1980 Census*, PHC80-E4; *Content Reinterview Study: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*,

PHC80-E2; *1980 Census of Population*, Vol. 1, (PC80-1), Appendixes B, C, and D. *Content Reinterview Survey: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*, 1990, CPH-E-1; *Effectiveness of Quality Assurance*, CPH-E-2; *Programs to Improve Coverage in the 1990 Census*, 1990, CPH-E-3. For Census 2000 evaluations, see <<http://www.census.gov/pred/www>>.

County Business Patterns

Universe, Frequency, and Types of Data: County Business Patterns is an annual tabulation of basic data items extracted from the Business Register, a file of all known single- and multilocation employer companies maintained and updated by the U.S. Census Bureau. Data include number of establishments, number of employees, first quarter and annual payrolls, and number of establishments by employment size class. Data are excluded for self-employed individuals, private households, railroad employees, agricultural production workers, and most government employees.

Type of Data Collection Operation: The annual Company Organization Survey provides individual establishment data for multilocation companies. Data for single establishment companies are obtained from various Census Bureau programs, such as the Annual Survey of Manufactures and Current Business Surveys, as well as from administrative records of the Internal Revenue Service, the Social Security Administration, and the Bureau of Labor Statistics.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The data are subject to nonsampling errors, such as inability to identify all cases in the universe; definition and classification difficulties; differences in interpretation of questions; errors in recording or coding the data obtained; and estimation of employers who reported too late to be included in the tabulations and for records with missing or misreported data.

Sources of Additional Materials: U. S. Census Bureau, *County Business Patterns*

Current Population Survey (CPS)

Universe, Frequency, and Types of Data: Nationwide monthly sample designed primarily to produce national and state estimates of labor force characteristics of the civilian noninstitutionalized population 16 years of age and older.

Type of Data Collection Operation: Multi-stage probability sample that currently includes 72,000 households from 824 sample areas. Sample size increased in some states to improve data reliability for those areas on an annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75 percent; year-to-year overlap is 50 percent.

Data Collection and Imputation Procedures: For first and fifth months that a household is in sample, personal interviews; other months, approximately 85 percent of the data collected by phone. Imputation is done for item nonresponse. Adjustment for total nonresponse is done by a predefined cluster of units, by MSA size and residence; for item nonresponse imputation varies by subject matter.

Estimates of Sampling Error: The national total estimates of the civilian labor force and of employment have monthly CVs of about .2 percent and annual average CVs of about .125 percent. Unemployment is a much smaller characteristic and consequently has substantially larger CVs than the civilian labor force or employment. The national unemployment rate, the most important CPS statistic, has a monthly CV of about 2 percent and an annual average CV of about 1 percent. The CVs for states vary since more populous states have larger samples (and smaller CVs) than states with smaller populations. Assuming a 6 percent unemployment rate, the smallest states have monthly CVs of about 17 percent and annual average CVs of about 8 percent. The estimated CVs for family income and poverty rate for all persons in 2005 are .4 percent and 1.2 percent, respectively. CVs for subnational areas, such as states, tend to be larger and vary by area.

Other (nonsampling) Errors: Estimates of response bias on unemployment are available. Estimates of unemployment rate from reinterviews range from -2.4 percent to 1.0 percent of the basic CPS unemployment rate (over a 30-month span from January 2004 through June 2006). Eligible CPS households are approximately 82 percent of the assigned households, with a corresponding response rate of 91 percent.

Sources of Additional Material: U.S. Census Bureau and Bureau of Labor Statistics, Current Population Survey: Design and Methodology, (Technical Paper 66), available on the Internet <<http://www.census.gov/prod/2006pubs/tp-66.pdf>> and the Bureau of Labor Statistics, <<http://www.bls.gov/cps/>> and the *BLS Handbook of Methods*, Chapter 1, available on the Internet at <<http://www.bls.gov/opub/hom/homch1a.htm>>.

Foreign Trade—Export Statistics

Universe, Frequency, and Types of Data: The export declarations collected by U.S. Bureau of Customs and Border Protection are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, country of destination, district of exportation, and mode of transportation.

Type of Data Collection Operation: Shipper's Export Declarations (paper and electronic) are generally required to be filed for the exportation of merchandise valued over \$2,500. U.S. Bureau of Customs and Border Protection officials collect and transmit the documents to the Census Bureau on a flow basis for data compilation. Data for shipments valued under \$2,501 are estimated, based on established percentages of individual country totals.

Data Collection and Imputation Procedures: Statistical copies of Shipper's Export Declarations are received on a daily basis from ports throughout the country and subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued over \$2,500. Estimates for shipments

valued at \$2,500 or less are made, based on established percentages of individual country totals.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The goods data are a complete enumeration of documents collected by the U.S. Bureau of Customs and Border Protection and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions. Additional information on errors affecting export data can be found at <<http://www.census.gov/foreign-trade/Press-Release/currentpressrelease/explain.pdf>>.

Sources of Additional Material: U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT 920 U.S. Merchandise trade: selected highlights, and Information Section on Goods and Services at <<http://www.census.gov/ft900>>.

Foreign Trade—Import Statistics

Universe, Frequency, and Types of Data:

The import entry documents collected by U.S. Bureau of Customs and Border Protection are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, country of origin, district of entry, and mode of transportation.

Type of Data Collection Operation: Import entry documents, either paper or electronic, are required to be filed for the importation of goods into the United States valued over \$2,000 or for articles which must be reported on formal entries. U.S. Bureau of Customs and Border Protection officials collect and transmit statistical copies of the documents to the Census Bureau on a flow basis for

data compilation. Estimates for shipments valued under \$2,001 and not reported on formal entries are based on estimated established percentages for individual country totals.

Data Collection and Imputation Procedures: Statistical copies of import entry documents, received on a daily basis from ports of entry throughout the country, are subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued at \$2,001 and over or items which must be reported on formal entries.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The goods data are a complete enumeration of documents collected by the U.S. Bureau of Customs and Border Protection and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing, and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions. Additional information on errors affecting import data can be found at <<http://www.census.gov/foreign-trade/Press-Release/currentpressrelease/explain.pdf>>.

Sources of Additional Material: U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT920 U.S. Merchandise Trade: selected highlights, and Information Section on Goods and Services at <<http://www.census.gov/ft900>>.

Monthly Retail Trade and Food Service Survey

Universe, Frequency, and Types of Data: Provides monthly estimates of retail and food service sales by kind of business and end of month inventories of retail stores.

Type of Data Collection Operation: Probability sample of all firms from a list frame. The list frame is the Bureau's Business Register updated quarterly for

recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind of business code by the Social Security Administration. The largest firms are included monthly; a sample of others is included every month also.

Data Collection and Imputation Procedures: Data are collected by mail questionnaire with telephone follow-ups and fax reminders for nonrespondents. Imputation is made for each nonresponse item and each item failing edit checks.

Estimates of Sampling Error: For the 2006 monthly surveys, CVs are about 0.4 percent for estimated total retail sales and 0.7 percent for estimated total retail inventories. Sampling errors are shown in monthly publications.

Other (nonsampling) Errors: Imputation rates are about 22 percent for monthly retail and food service sales, and 29 percent for monthly retail inventories.

Sources of Additional Material: U.S. Census Bureau, Current Business Reports, Annual Revision of Monthly Retail and Food Services: Sales and Inventories.

Monthly Survey of Construction

Universe, Frequency, and Types of Data: Survey conducted monthly of newly constructed housing units (excluding mobile homes). Data are collected on the start, completion, and sale of housing. (Annual figures are aggregates of monthly estimates.)

Type of Data Collection Operation: A multistage probability sample of approximately 900 of the 20,000 permit-issuing jurisdictions in the U.S. was selected. Each month in each of these permit offices, field representatives list and select a sample of permits for which to collect data. To obtain data in areas where building permits are not required, a multistage probability sample of 70 land areas (census tracts or subsections of census tracts) was selected. All roads in these areas are canvassed and data are collected on all new residential construction found. Sampled buildings are followed up until they are completed (and sold, if for sale).

Data Collection and Imputation Procedures: Data are obtained by telephone inquiry and/or field visit. Nonresponse/undercoverage adjustment factors are used to account for late reported data.

Estimates of Sampling Error: Estimated CV of 3 percent to 4 percent for estimates of national totals of units started, but may be higher than 20 percent for estimated totals of more detailed characteristics, such as housing units in multiunit structures.

Other (nonsampling) Errors: Response rate is over 90 percent for most items. Nonsampling errors are attributed to definitional problems, differences in interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.

Sources of Additional Material: All data are available on the Internet at <http://www.census.gov/const/www/newressalesindex.html> or <http://www.census.gov/const/www/newsresconstindex.html>. Further documentation of the survey is also available at those sites.

Nonemployer Statistics

Universe, Frequency, and Types of Data: Nonemployer statistics are an annual tabulation of economic data by industry for active businesses without paid employees that are subject to federal income tax. Data showing the number of firms and receipts by industry are available for the U.S., states, counties, and metropolitan areas. Most types of businesses covered by the Census Bureau's economic statistics programs are included in the nonemployer statistics. Tax-exempt and agricultural-production businesses are excluded from nonemployer statistics.

Type of Data Collection Operation: The universe of nonemployer firms is created annually as a byproduct of the Census Bureau's Business Register processing for employer establishments. If a business is active but without paid employees, then it becomes part of the potential nonemployer universe. Industry classification and receipts are available for each potential nonemployer

business. These data are obtained primarily from the annual business income tax returns of the Internal Revenue Service (IRS). The potential nonemployer universe undergoes a series of complex processing, editing, and analytical review procedures at the Census Bureau to distinguish nonemployers from employers, and to correct and complete data items used in creating the data tables.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: The data are subject to nonsampling errors, such as industry misclassification as well as errors of response, keying, nonreporting, and coverage.

Sources of Additional Material: U. S. Census Bureau, Nonemployer Statistics

Service Annual Survey

Universe, Frequency, and Types of Data:

The U.S. Census Bureau conducts the Service Annual Survey to provide nationwide estimates of revenues and expenses for selected service industries. Estimates are summarized by industry classification based on the 2002 North American Industry Classification System (NAICS). Selected service industries covered by the Service Annual Survey include all or part of the following NAICS sectors: Transportation and Warehousing (NAICS 48–49); Information (NAICS 51); Finance and Insurance (NAICS 52); Real Estate and Rental and Leasing (NAICS 53); Professional, Scientific, and Technical Services (NAICS 54); Administrative and Support and Waste Management and Remediation Services (NAICS 56); Health Care and Social Assistance (NAICS 62); Arts, Entertainment, and Recreation (NAICS 71); and Other Services, except Public Administration (NAICS 81). Data collected include total revenue, total expenses, detailed expenses, revenue from e-commerce transactions; and for selected industries, revenue from detailed service products, revenue from exported services, and inventories. For industries with a significant nonprofit component, separate estimates are developed for taxable firms and firms and organizations exempt

from federal income taxes. Questionnaires are mailed in January and request annual data for the prior year. Estimates are published approximately 12 months after the initial survey mailing.

Type of Data Collection Operation: The Service Annual Survey estimates are developed from a probability sample of employer firms and administrative records for nonemployers. Service Annual Survey questionnaires are mailed to a probability sample that is periodically reselected from a universe of firms located in the United States and having paid employees. The sample includes firms of all sizes and covers both taxable firms and firms exempt from federal income taxes. Updates to the sample are made on a quarterly basis to account for new businesses. Firms without paid employees, or nonemployers, are included in the estimates through imputation and/or administrative records data provided by other federal agencies. Links to additional information about confidentiality protection, sampling error, nonsampling error, sample design, definitions, and copies of the questionnaires may be found on the Internet at <<http://www.census.gov/econ/www/servmenu.html>>.

Estimates of Sampling Error: Coefficients of variation (CVs) for the 2005 Service Annual Survey estimates range from 0.4 percent to 1.8 percent for total revenue estimates computed at the NAICS sector (2-digit NAICS code) level. The full 2005 Service Annual Survey results, including coefficients of variations (CVs), can be found at <<http://www.census.gov/econ/www/servmenu.html>>. Links to additional information regarding sampling error may be found at: <<http://www.census.gov/svsd/www/cv.html>>.

Other (Nonsampling) Errors: Data are imputed for unit nonresponse, item nonresponse, and for reported data that fails edits. The percent of imputed data for total revenue for the 2005 Service Annual Survey is approximately 9 percent.

Sources of Additional Material: U.S. Census Bureau, *Current Business Reports*, *Service Annual Survey*, Census Bureau Web site: <<http://www.census.gov/econ/www/servmenu.html>>.

Survey of Business Owners (SBO)

Universe, Frequency, and Types of Data:

The Survey of Business Owners (SBO), formerly known as the Surveys of Minority- and Women-Owned Business Enterprises (SMOBE/SWOBE), provides statistics that describe the composition of U.S. businesses by gender, Hispanic or Latino origin, and race. Data are presented for businesses owned by American Indians and Alaska Natives, Asians, Blacks, Hispanics, Native Hawaiians and Other Pacific Islanders, and Women. All U.S. firms operating during 2002 with receipts of \$1,000 or more, which are classified by the North American Industry Classification System (NAICS) codes 11 through 99, are represented, except for the following: NAICS 111, 112, 4811 (part), 482, 491, 525 (part), 813, 814, and 92. The lists of all firms (or sample frames) are compiled from a combination of business tax returns and data collected on other economic census reports. The published data include the number of firms, gross receipts, number of paid employees, and annual payroll. Data are presented by industry classifications and/or geographic area (states, metropolitan and micropolitan statistical areas, counties, and corporate municipalities (places) including cities, towns, townships, villages, and boroughs), and size of firm (employment and receipts).

Type of Data Collection Operation: The survey is based on a stratified probability sample of approximately 2.3 million firms from a universe of approximately 23 million firms. There were 5.5 million firms with paid employees and 17.4 million firms with no paid employees. The data are based on the entire firm rather than on individual locations of a firm.

Data Collection and Imputation Procedures: Data were collected through a mailout/mailback operation. Compensation for missing data is addressed through reweighting, edit correction, and standard statistical imputation methods.

Estimates of Sampling Error: Sampling error is present in these estimates because they are based on the results of a sample survey and not on an enumeration of the entire universe. Since these

estimates are based on a probability sample, it is possible to estimate the sampling variability of the survey estimates. The standard error (SE) provides a measure of the variation. The relative standard error or coefficient of variation (CV) provides a measure of the magnitude of the variation relative to the estimate and is calculated as 100 multiplied by the ratio of the estimate to the SE. The CVs for number of firms and receipts at the national level typically range from 0 to 4 percent.

Other (nonsampling) Error: Nonsampling errors are attributed to many sources: inability to obtain information for all cases in the universe, adjustments to the weights of respondents to compensate for nonrespondents, imputation for missing data, data errors and biases, mistakes in recording or keying data, errors in collection or processing, and coverage problems. Explicit measures of the effects of these nonsampling errors are not available. However, it is believed that most of the important operational and data errors were detected and corrected through an automated data edit designed to review the data for reasonableness and consistency. Quality control techniques were used to verify that operating procedures were carried out as specified.

Sources of Additional Materials: U.S. Census Bureau, Guide to the 2002 Economic Census and Related Statistics; <<http://www.census.gov/econ/census02/guide/index.html>>.

U.S. DEPARTMENT OF EDUCATION
National Center for Education Statistics

Integrated Postsecondary Education Data Survey (IPEDS), Completions

Universe, Frequency, and Types of Data: Annual survey of all institutions and branches listed in the Education Directory, Colleges and Universities to obtain data on earned degrees and other formal awards, conferred by field of study, level of degree, sex, and by racial/ethnic characteristics (every other year prior to 1989, then annually).

Type of Data Collection Operation: Complete census.

Data Collection and Imputation Procedures: Data are collected through a Web-based survey in the fall of every year. Missing data are imputed by using data of similar institutions.

Estimates of Sampling Error: Not applicable.

Other (nonsampling Errors): For 2005–06, the response rate for degree-granting institutions was 100.0 percent.

Sources of Additional Material: U.S. Department of Education, National Center for Education Statistics, *Postsecondary Institutions in the United States: Fall 2006 and Degrees and Other Awards Conferred: 2005–06*. See <<http://www.nces.ed.gov/ipeds/>>.

National Household Education Surveys (NHES) Program

Universe, Frequency, and Types of Data:

The National Household Education Surveys Program is a system of telephone surveys of the noninstitutionalized civilian population of the United States. Surveys in NHES have varying universes of interest depending on the particular survey. Specific topics covered by each survey are at the NHES Web site <<http://nces.ed.gov/nhes>>. A list of the surveys fielded as part of NHES, each universe, and the years they were fielded is provided below. 1) Adult Education—Interviews were conducted with a representative sample of civilian, noninstitutionalized persons age 16 and older who were not enrolled in grade 12 or below (1991, 1995, 1999, 2001, 2003, 2005). 2) After-School Programs and Activities—Interviews were conducted with parents of a representative sample of students in grades K through 8 (1999, 2001, 2005). 3) Civic Involvement—Interviews were conducted with representative samples of parents, youth, and adults (1996, 1999). 4) Early Childhood Program Participation—Interviews were conducted with parents of a representative sample of children from birth through grade 3, with the specific age groups varying by survey year (1991, 1995, 1999, 2001, 2005). 5) Parent and Family Involvement in Education—Interviews were conducted with parents of a representative sample of children age 3 through grade 12 or in grades K through 12 depending

on the survey year (1996, 1999, 2003, and 2007 forthcoming). 6) School Readiness—Interviews were conducted with parents of a representative sample of 3-to-7-year-old children (1993 and 1999) and of 3-to-5-year-old children, not yet in kindergarten, 2007 forthcoming).

Type of Data Collection Operation: NHES uses telephone interviews to collect data.

Data Collection and Imputation Procedures: Telephone numbers are selected using random digit dialing (RDD) techniques. Approximately 45,000 to 64,000 households are contacted in order to identify persons eligible for the surveys. Data are collected using computer-assisted telephone interviewing (CATI) procedures. Missing data are imputed using hot-deck imputation procedures.

Estimates of Sampling Error: Unweighted sample sizes range between 2,250 and 55,708. The average root design effects of the surveys in NHES range from 1.1 to 1.5.

Other (nonsampling) Errors: Because of unit nonresponse and because the samples are drawn from households with telephone instead of all households, nonresponse and/or coverage bias may exist for some estimates. However, both sources of potential bias are adjusted for in the weighting process. Analyses of both potential sources of bias in the NHES collections have been studied and no significant bias has been detected.

Sources of Additional Material: Please see the NHES Web site at <<http://nces.ed.gov/nhes>>.

Schools and Staffing Survey (SASS)

Universe, frequency and Types of Data: NCES designed the SASS survey system to emphasize teacher demand and shortage, teacher and administrator characteristics, school programs, and general conditions in schools. SASS also collects data on many other topics, including principals' and teachers' perceptions of school climate and problems in their schools; teacher compensation; district hiring practices and basic characteristics of the student population.

The SASS has had four core components: the School Questionnaire, the Teacher Questionnaire, the Principal Questionnaire, and the School District Questionnaire. For the 2003–04 SASS, a sample of public charter schools is included in the sample as part of the public school questionnaire. Since 1987–88, the SASS is the largest, most extensive survey of K through 12 school districts, schools, teachers, and administrators in the U.S. Surveys have been conducted every 3 to 4 years depending on budgetary constraints. The SASS includes data from public, private, and Bureau of Indian Affairs school sectors. Therefore, the SASS provides a multitude of opportunities for analysis and reporting on elementary and secondary educational issues

Type of Data Collection Operation: The U.S. Census Bureau performs the data collection and begins by sending advance letters to the sampled Local Education Agencies (LEAs) and schools in August and September of collection years. Beginning in October, questionnaires are delivered by U.S. Census Bureau field representatives. The sampling frame for the public school sample is the most recent Common Core of Data (CCD) school file. CCD is a universe file that includes all elementary and secondary schools in the United States. Schools operated by the Department of Defense or those that offered only kindergarten or prekindergarten or adult education were excluded from the SASS sample. The list frame used for the private school sample is the most recent Private School Universe Survey (PSS) list, updated with association lists. An area frame supplement is based on the canvassing of private schools within specific geographical areas. A separate universe of schools funded by the Bureau of Indian Affairs (BIA) is drawn from the Program Education Directory maintained by the BIA. To avoid duplicates in the BIA files, BIA schools in the CCD school file are treated as public schools.

Estimates of Sampling Error: Sample errors can be calculated using replicate weights and Balanced Repeated Replication complex survey design methodology. Errors depend on cell sizes and

range from less than 1 percent to over 5 percent (for reasonable cell sizes).

Other (nonsampling) Errors: Because of unit nonresponse, bias may exist in some sample cells. However, bias has been adjusted for in the weighting process. Analysis of bias has been studied and no significant bias has been detected.

Sources of Additional Material: Please see the SASS Web site at <<http://nces.ed.gov/surveys/sass/>>.

U.S. DEPARTMENT OF JUSTICE, FEDERAL BUREAU OF INVESTIGATION

Uniform Crime Reporting (UCR) Program

Universe, Frequency, and Types of Data: Monthly reports on the number of criminal offenses that become known to law enforcement agencies. Data are also collected on crimes cleared by arrest or exceptional means; age, sex, and race of arrestees and for victims and offenders for homicides, number of law enforcement employees, on fatal and nonfatal assaults against law enforcement officers, and on hate crimes reported.

Type of Data Collection Operation: Crime statistics are based on reports of crime data submitted either directly to the FBI by contributing law enforcement agencies or through cooperating state UCR Programs.

Data Collection and Imputation Procedures: States with UCR programs collect data directly from individual law enforcement agencies and forward reports, prepared in accordance with UCR standards, to the FBI. Accuracy and consistency edits are performed by the FBI.

Estimates of Sampling Error: Not applicable.

Other (nonsampling) Errors: During 2006, law enforcement agencies active in the UCR Program represented 94.2 percent of the total population. The coverage amounted to 95.6 percent of the United States population in Metropolitan Statistical Areas, 86.3 percent of the population in cities outside metropolitan areas, and 88.1 percent in nonmetropolitan counties.

Sources of Additional Material: U.S. Department of Justice, Federal Bureau of Investigation, *Crime in the United States*, annual, *Hate Crime Statistics*, annual, *Law Enforcement Officers Killed and Assaulted*, annual, <<http://www.fbi.gov/ucr/ucr.htm>>.

U.S. INTERNAL REVENUE SERVICE

Corporation Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of unaudited corporation income tax returns, Forms 1120, 1120-A, 1120-F, 1120-L, 1120-PC, 1120-REIT, 1120-RIC, and 1120S, filed by corporations or businesses legally defined as corporations. Data provided on various financial characteristics by industry and size of total assets, and business receipts.

Type of Data Collection Operation: Stratified probability sample of approximately 110,000 returns for Tax Year 2005, allocated to sample classes which are based on type of return, size of total assets, size of net income or deficit, and selected business activity. Sampling rates for sample classes varied from .25 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return and to comply with statistical definitions.

Estimates of Sampling Error: Estimated CVs for Tax Year 2005: Returns with assets over \$10 million are self-representing. Coefficients of variation are published in the 2005 Statistics of Income Corporation Income Tax Returns, Table 1, by industry group.

Other (nonsampling) Errors: Nonsampling errors include coverage errors, processing errors, and response errors.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Corporation Income Tax Returns*, annual.

Individual Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of unaudited individual income tax returns, Forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. Data provided on various financial characteristics by size of adjusted gross income, marital status, and by taxable and nontaxable returns. Data by state, based on the population of returns filed, also include returns from 1040NR, filed by nonresident aliens plus certain self employment tax returns.

Type of Data Collection Operation: Stratified probability sample of 292,966 returns for tax year 2005. The sample is classified into sample strata based on the larger of total income or total loss amounts, the size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates for sample strata varied from 0.01 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error: Estimated CVs for tax year 2005: Adjusted gross income less deficit 0.08 percent; salaries and wages 0.16 percent; and tax exempt interest received 1.45 percent. (State data not subject to sampling error.)

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Individual Income Tax Returns*, annual, (Publication 1304).

Partnership Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of preaudited income tax returns of partnerships related to financial and tax-related activity during calendar years 2003 to 2006 and reported on

Forms 1065 and 1065B to the IRS in calendar year 2007. Data are provided by industry, based on the NAICS industry coding used by IRS.

Type of Data Collection Operation: Stratified probability sample of approximately 45,000 partnership returns from a population of 3.2 million filed during calendar year 2007. The sample is classified based on combinations of industry code, gross receipts, net income or loss, and total assets. Sampling rates vary from 0.07 percent to 100 percent.

Data Collection and Imputation Procedures: The sample of tax return records are selected via computer after data are transcribed by IRS and placed on an administrative file. Data are manually adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return. Data not available due to regulations are handled with weighting adjustments.

Estimates of Sampling Error: Some of the estimated Coefficients of Variation (the estimated standard error of the total divided by the estimated total) for tax year 2006: For number of partnerships, 0.36 percent; business receipts, 0.18 percent; net income, 0.73 percent; and ordinary business income; 0.53 percent.

Other (nonsampling) Errors: The potential exists for coverage error due to unavailable returns; processing errors; and taxpayer reporting errors, since data are preaudit.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Partnership Returns and Statistics of Income Bulletin*, Vol. 27, No. 2 (Fall 2007).

Sole Proprietorship Income Tax Returns

Universe, Frequency, and Types of Data: Annual study of unaudited income tax returns of nonfarm sole proprietorships, Form 1040 with business schedules. Data provided on various financial characteristics by industry.

Type of Data Collection Operation: Stratified probability sample of 82,689 sole proprietorships for tax year 2005. The sample is classified based on presence

or absence of certain business schedules; the larger of total income or loss; size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates vary from 0.1 percent to 100 percent.

Data Collection and Imputation Procedures: Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

Estimates of Sampling Error: Estimated CVs for tax year 2005 are available. For sole proprietorships, business receipts, 0.56 percent; depreciation 1.26 percent.

Other (nonsampling) Errors: Processing errors and errors arising from the use of tolerance checks for the data.

Sources of Additional Material: U.S. Internal Revenue Service, *Statistics of Income, Sole Proprietorship Returns* (for years 1980 through 1983) and *Statistics of Income Bulletin*, Vol. 27, No. 1 (Summer 2007, as well as bulletins for earlier years).

U.S. NATIONAL CENTER FOR HEALTH STATISTICS (NCHS)

National Health Interview Survey (NHIS)

Universe, Frequency, and Types of Data: Continuous data collection covering the civilian noninstitutional population to obtain information on demographic characteristics, conditions, injuries, impairments, use of health services, health behaviors, and other health topics.

Type of Data Collection Operation: Multi-stage probability sample of 49,000 households (in 198 PSUs) from 1985 to 1994; 36–40,000 households (358 design PSUs or 449 effective PSUs when divided by state boundaries) from 1995 to 2005; an estimated completed 35,000 households (428 effective PSUs) beginning in 2006.

Data Collection and Imputation Procedures: Some missing data items (e.g., race, ethnicity) are imputed using a hot deck imputation value. Sequential regression models are used to create

multiple imputation files for family income. Unit nonresponse is compensated for by an adjustment to the survey weights.

Estimates of Sampling Error: For 2006 medically attended injury episodes rates in the past 12 months by falling for: females 49.93 (4.44), and males 38.83 (4.59) per 1,000 population; for 2006 injury episodes rates during the past 12 months inside the home—34.89 (2.81) per 1,000 population.

Other (nonsampling) Errors: The response rate was 93.8 percent in 1996; in 2006, the total household response rate was 87.3 percent, with the final family response rate of 87.0 percent, and the final sample adult response rate of 70.8 percent. (Note: the NHIS questionnaire was redesigned in 1997, and a new sample design was instituted in 2006).

National Survey of Family Growth (NSFG)

Universe, Frequency, and Types of Data: Periodic survey of men and women 15–44 years of age in the household population of the United States. Interviews were conducted in 2002 in person by trained female interviewers. Interview topics covered include births and pregnancies, marriage, divorce, and cohabitation, sexual activity, contraceptive use, and medical care. For men, data on father involvement with children were collected. The most sensitive data—on sexual behavior related to HIV and Sexually Transmitted Disease

risk—were collected in a self-administered form in which the data are entered into a computer.

Type of Data Collection Operation: In the 2002 (Cycle 6) NSFG, the sample was a multistage area probability sample of men and women 15–44 years of age in the household population of the United States. Only one person 15–44 was selected from households with one or more persons 15–44. Data were collected and entered into laptop (notebook) computers. In the self-administered portion, the respondent entered his or her own answers into the computer. Sample included 12,571 interviews. The response rate was 79 percent. Hispanic and Black persons, as well as those 15–19 years of age, were sampled at higher rates than White adults. All percentages and other statistics shown for the NSFG are weighted to make national estimates. The weights adjust for the different rates of sampling for each group, and for nonresponse.

Data Collection and Imputation Procedures: When interviews are received, they are reviewed for consistency and quality, and analysis variables (recodes) are created. Missing data on these recodes were imputed using multiple regression techniques and checked again for consistency. Variables indicating whether a value has been imputed (“imputation flags”) are included on the data file.

Estimates of Sampling Error: Sampling error codes are included on the data file so that users can estimate sampling errors for their own analyses. Sampling error estimates for nine illustrative analyses are shown on the NSFG Web site at <<http://www.cdc.gov/nchs/nsfg.htm>>. Sampling error estimates are also shown in most NCHS reports.

Other (nonsampling) Errors: In any survey, errors can occur because the respondent (the person being interviewed) does not recall the specific fact or event being asked about. The NSFG questionnaire in 2002 was programmed to check the consistency of many variables during the interview, so that the interviewer and respondent had a chance to correct any inconsistent information. Further checking occurred after

the interview and during recoding and imputation. Typically, less than 1 percent of cases need imputation because of missing data.

National Vital Statistics System

Universe, Frequency, and Types of Data: Annual data on births and deaths in the United States.

Type of Data Collection Operation: Mortality data based on complete file of death records, except 1972, based on 50 percent sample. Natality statistics 1951–1971, based on 50 percent sample of birth certificates, except a 20 percent to 50 percent sample in 1967, received by NCHS.

Data Collection and Imputation Procedures: Reports based on records from registration offices of all states, District of Columbia, New York City, Puerto Rico, Virgin Islands, Guam, American Samoa, and Northern Marianas.

Estimates of Sampling Error: For recent years, there is no sampling for these files; the files are based on 100 percent of events registered.

Other (nonsampling) Errors: It is believed that more than 99 percent of the births and deaths occurring in this country are registered.

Sources of Additional Material: U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. I and Vol. II, annual, and the *National Vital Statistics Reports*. See the NCHS Web site at <<http://www.cdc.gov/nchs/nvss.htm>>.

National Highway Traffic Safety Administration (NHTSA)

Fatality Analysis Reporting System (FARS)

Universe, Frequency, and Types of Data:

FARS is a census of all fatal motor vehicle traffic crashes that occur throughout the United States including the District of Columbia and Puerto Rico on roadways customarily open to the public. The crash must be reported to the state/jurisdiction and at least one directly related fatality must occur within thirty days of the crash.

Type of Data Collection Operation: One or more analysts, in each state, extract data from the official documents and enter the data into a standardized electronic database.

Data Collection and Imputation Procedures: Detailed data describing the characteristics of the fatal crash, the vehicles and persons involved are obtained from police crash reports, driver and vehicle registration records, autopsy reports, highway department, etc. Computerized edit checks monitor the accuracy and completeness of the data. The FARS incorporates a sophisticated mathematical multiple imputation procedure to develop a probability distribution of missing blood alcohol concentration (BAC) levels in the database for drivers, pedestrians, and cyclists.

Estimates of Sampling Error: Since this is census data, there are no sampling errors.

Other (nonsampling) Errors: FARS represents a census of all police-reported crashes and captures all data reported at the state level. FARS data undergo a rigorous quality control process to prevent inaccurate reporting. However, these data are highly dependent on the accuracy of the police accident reports. Errors or omissions within police accident reports may not be detected.

Sources of Additional Material: The FARS Coding and Validation Manual, ANSI D16.1 Manual on Classification of Motor Vehicle Traffic Accidents (Sixth Edition).

Appendix V
Tables Deleted From the
2008 Edition of the Statistical Abstract

2008
number

Sec. 1. POPULATION

- 19 Resident Population by Region, Race, and Hispanic Origin: 2000
 68 Families by Size and Presence of Children: 1990 to 2006
 74 Self-Described Religious Identification of Adult Population: 1990 and 2001

Sec. 2. VITAL STATISTICS

- 93 Contraceptive Use by Women, 15 to 44 Years of Age, Who Have Ever Had Sexual Intercourse: 1982 to 2002

Sec. 3. HEALTH AND NUTRITION

- 131 Prescription Drug Use in the Past Month, by Sex, Age, Race, and Hispanic Origin: 1988–1994 and 1999–2002

Sec. 4. EDUCATION

- 226 Type of School Attended by Student and Household Characteristics: 1993 and 2003
 228 Students Who are Homeschooled by Selected Characteristics: 2003
 238 Public Schools Using Selected Safety and Security Measures, by School Characteristics: 2003–04
 250 Public Schools With Broadband and Wireless Connections: 2000 to 2005
 251 Public Schools Providing Hand-held Computers to Students or Teachers for Instructional Purposes, by School Characteristics: 2002 to 2005
 254 Distance Education in Public Elementary and Secondary Schools: 2002–2003
 261 Public High Schools Offering Dual Credit and Exam-Based Courses and Course Enrollments: 2002–2003
 262 Foreign Language Enrollment in Public High Schools: 1970 to 2000
 281 Average Amount of Aid Received by Aided Undergraduates: 2003–2004
 282 Average Out-of-Pocket Net Price of Attendance for Undergraduates: 2003–04

Sec. 5. LAW ENFORCEMENT, COURTS, AND PRISONS

- 320 Drug Use by Arrestees in Major U.S. Cities by Type of Drug and Sex: 2003

Sec. 6. GEOGRAPHY AND ENVIRONMENT

- 349 Total and Federally Owned Land by State: 2004
 351 Developed Land by Type: 1982 to 2001
 370 Federal Funding for the Superfund, Brownfields, and Related Programs: 1995 to 2005

Sec. 8. STATE AND LOCAL GOVERNMENT FINANCES AND EMPLOYMENT

- 427 State and Local Governments—Per Capita Summary of Finances by State: 2004

Sec. 11. SOCIAL INSURANCE AND HUMAN SERVICES

- 560 Licensed Child Care Centers and Family Child Care Providers by State and Other Areas: 2005
 563 Foundations—Number and Finances: 1990 to 2005

Sec. 12. LABOR FORCE, EMPLOYMENT, AND EARNINGS

- 618 Adults in Selected Work-Related Informal Learning Activities: 2002–03

Sec. 15. BUSINESS ENTERPRISE

- 744 Women-Owned Firms by Kind of Business and Receipts Size: 2002

Sec. 15. **BUSINESS ENTERPRISE—Con.**

- 745 Hispanic- or Latino-Owned Firms by Kind of Business and Receipts Size: 2002
747 Black-Owned Firms by Kind of Business and Receipts: 2002
748 American Indian- and Alaska Native-Owned Firms by Kind of Business and Receipts Size: 2002
749 Asian-Owned Firms by Kind of Business and Receipts Size: 2002
750 Native Hawaiian- and Other Pacific Islander-Owned Firms by Kind of Business and Receipts Size: 2002

Sec. 16. **SCIENCE AND TECHNOLOGY**

- 784 College Graduates by Education and Occupation: 1993 and 2003
785 Profile of Employed College Graduates by Employment Sector and Occupation Group: 2003
794 Space Vehicle Systems—Net Sales and Backlog Orders: 1970 to 2005
798 Nobel Prize Laureates in Selected Sciences: 1901 to 2004

Sec. 17. **AGRICULTURE**

- 828 Greenhouse and Nursery Crops—Value of Production, Trade, and Consumption: 1990 to 2005

Sec. 18. **NATURAL RESOURCES**

- 875 U.S. Petroleum Balance: 1980 to 2005
881 Liquefied Petroleum Gases—Summary: 1980 to 2006

Sec. 20. **CONSTRUCTION AND HOUSING**

- 926 Construction—Establishments, Employees, Payroll, Value of Construction, Costs, and Capital Expenditures by Kind of Business (NAICS Basis): 2002

Sec. 22. **WHOLESALE AND RETAIL TRADE**

- 1009 Wholesale and Retail Trade—Establishments, Sales, Payroll, and Employees: 2002
1030 Shopping Centers—Number, Gross Leasable Area, and Retail Sales by Gross Leasable Area: 1990 to 2005
1031 Shopping Centers—Gross Leasable Area and Retail Sales, by State: 2005

Sec. 23. **TRANSPORTATION**

- 1091 Line Haul Railroads—Producer Price Indexes: 2000 to 2006

Sec. 24. **INFORMATION AND COMMUNICATIONS**

- 1124 → Academic Libraries—Summary: 2004

Sec. 25. **BANKING, FINANCE, AND INSURANCE**

- 1141 Flow of Funds Accounts—Liabilities of Households: 1990 to 2006
1143 Amount of Debt Held by Families—Percent Distribution: 2001 and 2004
1144 Ratios of Debt Payments to Family Income: 1995 to 2004
1180 Securities Listed on New York Stock Exchange: 1990 to 2006
1181 Stock Ownership by Age of Head of Family and Family Income: 1995 to 2004
1183 Characteristics of Equity Owners: 2005
1188 Mutual Fund Retirement Assets: 1990 to 2005

Sec. 26. **ARTS, ENTERTAINMENT, AND RECREATION**

- 1210 Participation in Various Arts Activities: 2002
1239 Impact of International Travel on States' Economies: 2004

Sec. 30. **INTERNATIONAL STATISTICS**

- 1316 Gross Domestic Product (GDP) by Country: 1995 to 2004
1326 Income Tax and Social Security Contributions as Percent of Labor Costs: 2004

Statistical Abstract and Supplements

Printed Products

COOMAN SQUARE

Statistical Abstract of the United States: 2009. Since 1878, the authoritative summary of statistics on the social, political, and economic organization of the United States. Includes a representative selection of statistics widely used by public officials, business analysts, educators, librarians, research workers, and students.

County and City Data Book: 2007. The latest in a series of publications that contains data for all counties and cities with a population of 25,000 or more. It also includes 2005 American Community Survey data for incorporated places of 100,000 or more inhabitants. Also included is a complete set of state maps showing all counties, places of 25,000 or more, and metropolitan areas. GPO price: \$75; GPO stock number: 003-024-09073-2. NTIS price: \$69; NTIS stock number: PB 2008-105137.

State and Metropolitan Area Data Book: 2006. This volume, the sixth in a series, presents a vast array of demographic and economic data for the United States, the 50 states, and the

District of Columbia; metropolitan areas (MAs); also includes selected data for component counties of MAs and population data for central cities of MAs. GPO price: \$47; GPO stock number: 003-024-09064-3. NTIS price: \$40 plus handling fee; NTIS stock number: PB2006-114701.

GPO orders may be mailed to: Superintendent of Documents, Government Printing Office (GPO), P. O. Box 979050, St. Louis, MO 63197-9000. Payment must accompany order. Telephone: 202-512-1800 or 1-866-512-1800. Fax: 202-512-2104. Publications also available at 732 N. Capitol St., NW, Washington, DC 20401 (telephone: 202-512-0132) and online at <<http://bookstore.gpo.gov>>.

NTIS orders may be mailed to: National Technical Information Service (NTIS), U.S. Department of Commerce, 5285 Port Royal Road, Springfield, VA 22161. Payment must accompany order. Telephone: 703-605-6000 or 1-800-553-6847. Fax: 703-605-6900. Publications also available online at <<http://www.ntis.gov/products/>>.

Electronic Products

Statistical Abstract of the United States on CD-ROM. Contains more than 1,300 tables found in the printed version as Adobe Acrobat files and Excel spreadsheets. Single copies are available for free distribution from Customer Services at 1-800-923-8282.

USA Counties on the Internet. Features over 6,000 data items for the United

States, states, and counties. Covered topical areas include age, agriculture, banking, building permits, business patterns, crime, earnings, education, elections, employment, government, health, households, housing, income, labor force, manufactures, population, poverty, social programs, trade, veterans, vital statistics, and water use. Available at <<http://censtats.census.gov/usa/usa.shtml>>.

The Statistical Abstract is incomparable because it guides me to the appropriate data source, i.e., which agency is producing these statistics. Then I can go to that agency for more detail if I need it. Its great value also is in broadness of coverage."

— *University librarian*

"... a wonderful, single source...
... One of five 'must-haves' for...
... collection in...
... providing service...
... the company...
... ff."

— *Librarian,
Market research
company*

"I think it's the best value the U.S. Government provides its citizens."

The 128th edition of the Statistical Abstract continues a proud tradition of presenting a comprehensive and useful portrait of the social, political, and economic organization of the United States. The 2009 edition provides:

- More than 1,300 tables and graphs that cover a variety of topics such as religious composition of the U.S. population, assisted reproductive technology, military retirement, homeowner and rental vacancy rates, aquaculture products and sales, typical daily Internet activities, and expenditures for wildlife-related recreation.
- Expanded guide to other sources of statistical information both in print and on the Web.
- Listing of metropolitan and micropolitan areas and their population numbers.
